ADMIN PANEL / TENANT CONSOLE

Building Your Chatbot

Client onboarding & complete data specification

Every field we need from you, page by page of the admin panel

PART A: YOUR DATA -> PART B: WHERE IT GOES

Prepared for new chatbot clients

Admin panel reference captured 21 October 2026 - prominent-faster-dropper.ngrok-free.dev

Share credentials and API keys only through the agreed secure handoff - never in this document.

How we build your chatbot

What this document is: Part A lists every field you provide. Part B shows the admin panel page where each part goes.

1 - Register	You (or your onboarding manager) complete the register wizard: company basics, WhatsApp line, brand voice, business answers, notifications, guardrails.
2 - Configure	The onboarding team loads your profile, catalog, menu, intents and knowledge documents into the console.
3 - Review	Submitted registrations and profile changes wait in a review queue; an approved change is applied exactly as reviewed.
4 - Test	Sample customer questions run through the live bot and the built-in smoke checks before sign-off.
5 - Go live	Publishing creates an immutable version and swaps the live profile. Rollback is instant and never loses history.

Two ways to read this guide

Part A is the checklist to fill in: every field, what to enter, an example. Part B is the tour: a photo of every admin panel page with the fields that live there.

What we need from you - at a glance

- [ ] A1 Register wizard: company, WhatsApp line, brand voice, notifications, guardrails.
- [ ] A2 Your business answers: the vertical-specific questions for your industry.
- [ ] A3 Capability switches: which modules your bot switches on.
- [ ] A4 Catalogue rows: every product, service or package you sell.
- [ ] A5 WhatsApp menu options; A6 intents: the phrases customers use.
- [ ] A7 Knowledge documents: FAQs, policies, brochures, price lists.
- [ ] A8 Team accounts: who gets admin, support or distributor access.
- [ ] A9 Integrations (optional): payment gateway and logistics credentials.
- [ ] A10 Campaigns (optional): broadcast templates and audience segments.
- [ ] A11 Distributors (optional): your reseller network records.

Part A - Every field the client provides

The complete data specification. Each table lists every input, what to enter, and an example. Sections marked * are required.

A1 - Register wizard -- step 1: Company

Field	What to enter	Example / options
Company name *	Legal or registered business name.	Leeway Softech Pvt. Ltd.
Tenant id *	Short unique code, lowercase letters/digits. Used in URLs and APIs.	leeway-softech
Display name	Name customers see on WhatsApp. Defaults to company name.	Leeway Softech
Website	Public website URL.	https://example.com
Company logo	Logo file upload, shown in menus and the console.	PNG, min 512 x 512 px
Business field (vertical) *	Industry. Drives the questions asked, the bot vocabulary and default features.	E-commerce & retail / Software & IT services / Tours & travel / Banking & insurance / Finance & accounting / Healthcare & clinics / Real estate & property / Something else

A1 - Register wizard -- step 2: WhatsApp

Field	What to enter	Example / options
WhatsApp phone number *	The business line the bot answers, with country code.	+91 8000305305
WABA phone number id	Only if the onboarding team asks you to bind a WhatsApp Business API number.	not bound
Timezone *	Working timezone.	Asia/Kolkata
Opens *	Opening time.	09:30
Closes *	Closing time.	18:30
Open on	Working days of the week.	Mon, Tue, Wed, Thu, Fri, Sat
Always open	Switch on for 24x7 availability (disables the times above).	on / off
Out-of-hours message	Message customers receive while the business is closed.	We're closed right now. We'll reply at 9:30 AM.

A1 - Register wizard -- step 3: Brand & voice

Field	What to enter	Example / options
Bot name *	The assistant name customers see.	Asha
Tone	How the bot speaks. Vertical default is suggested.	Friendly and helpful / Professional and confident / Formal and compliant / Warm and helpful / Calm and empathetic / Concise and direct
Tagline	One-line brand tagline used in the menu.	Software that ships
Closing signature	Sign-off on bot messages.	-- Team Leeway

Support email *	Customer care email.	support@example.com
Support phone *	Country code + 10 digits.	+91 98765 43210
Menu greeting	Body of the WhatsApp menu. Blank uses the default.	Hi! I'm Asha from Leeway Softech. How can I help?

A1 - Register wizard -- step 4: Your business

Vertical-specific questions (see A2) plus the optional module switches (see A3): Campaigns, Distributors, Services, Products, Products & Schemes. Answer every required question -- these answers become the words the bot recognises.

A1 - Register wizard -- step 5: Notifications

Field	What to enter	Example / options
Sales / enquiries email *	Where leads, quotes and handoffs are pushed. Without a destination, leads nobody reads collect.	sales@example.com
Support email	Second notification destination.	support@example.com

A1 - Register wizard -- step 6: Guardrails

Field	What to enter	Example / options
Never state (one per line)	Claims the bot must refuse. Empty = vertical default applies.	We guarantee delivery in 24 hours / Our stock is always in sync / No hidden charges, ever
Forbidden terms	Tags the bot refuses to discuss.	legal advice
Handoff keywords	Tags that pause the bot and call a human.	human, agent
Escalate immediately on	Tags that escalate instantly, no bot reply.	complaint, fraud, urgent
Escalation message	What the customer sees on escalation.	Let me connect you to a team member right away.

Keep "Never state" and "Forbidden terms" disjoint -- the linter flags a profile when a forbidden term leaks into its own copy. Step 7 (Review) is a read-only confirmation; sub admins submit for approval instead of publishing.

A2 - Business questions per vertical (step 4)

Pick the rows for the client vertical. "chips" = one-tap multi-select tags; "select" = one option from the list. * = required.

E-commerce & retail	Type	Example / options
Product categories	chips	Fashion, Electronics, Home, Beauty, Sports, Grocery (+ your own)
Payment methods you accept	chips	UPI, Card, Net banking, Cash on delivery, Pay later
Delivery & returns policy in one line	text	Free delivery above Rs.999, 7-day returns
Order reference prefix	text	TG

Software & IT services	Type	Example / options
Technologies you work with	chips	React, Node.js, Python, AWS, Azure, Mobile apps, DevOps, AI/ML
How you work with clients	select	Fixed-price projects / Time and materials / Retainers & support plans
Typical engagement size	text	Projects from Rs.2,00,000 / retainers from Rs.25,000 per month
After-sales support	textarea	Free support window, AMC plans, SLA commitments...

Tours & travel	Type	Example / options
Destinations you sell	chips	Kerala, Goa, Kashmir, Rajasthan, Andaman, Dubai, Europe, Bali
Trip types	chips	Honeymoon, Family, Group, Solo, Corporate, Adventure
Booking and cancellation policy	textarea	Advance booking, cancellation windows, payment terms...
Seasonality	select	Year-round / Oct-Mar peak / Apr-Jun peak / Nov-Feb peak / Seasonal

Banking & insurance	Type	Example / options
Products on offer	chips	Savings account, Current account, Fixed deposit, Loans, Cards, Insurance
Regulatory note	textarea	How the bot must phrase regulated information, and what it must never state.

Finance & accounting	Type	Example / options
Services you offer	chips	ITR filing, GST, Audit, Company setup, Payroll, Advisory
Key deadlines the bot should mention	text	ITR due 31 July, GST monthly by the 20th

Healthcare & clinics	Type	Example / options
Departments	chips	General medicine, Dental, Paediatrics, Orthopaedics, Dermatology, Diagnostics
Triage and escalation rule *	textarea	The bot must never give a diagnosis; emergencies go straight to reception.

Real estate & property	Type	Example / options

Property types	chips	2 BHK Apartments, 3 BHK Luxury Flats, Villas, Commercial Offices, Plots
RERA registration details	text	RERA Registration No. PR/GJ/AHMEDABAD/...

Something else (generic)	Type	Example / options
What do you sell or offer?	chips	Products, Services, Courses, Memberships, Subscriptions

A3 - Capability switches (step 4 optional modules, later in Profile)

Anything switched off stays hidden from the console and the WhatsApp menu. Pre-selected flags differ per vertical; the full list:

Group	Switch	What it does
Selling online	Cart	Customers collect items before checking out.
Selling online	Buy now	One-tap purchase from a product page.
Selling online	Orders	Order records and order status.
Selling online	Track order	Customers look up an order with a number.
Selling online	Returns	Return / refund requests and policy.
Selling online	Distributors	A separate reseller price list.
Brochure	Offerings / Offering details	Browse what you sell; price, specs and images per item.
Brochure	Services / Products / Products & Schemes	Which catalogue menu entries exist.
Brochure	Brochure PDF	Send a downloadable brochure.
Enquiries & bookings	Lead capture	Collect name, phone and email.
Enquiries & bookings	Quotes	Collect requirements and send a quote request.
Enquiries & bookings	Callback	Offer to call the customer back.
Enquiries & bookings	Appointments	Book a slot with the team.
Self-service support	FAQ	Answer from an uploaded FAQ file.
Self-service support	Knowledge base	Answer from indexed documents.
Self-service support	Complaints	Register and track complaints.
Self-service support	Campaigns	Scheduled broadcast messages.
Human handover	Handoff	Pause the bot and alert a human.
Human handover	Human handover	Always allow a person to take over.

A4 - Catalogue / records -- one row per item you sell

The panel name depends on the vertical: Products (retail), Packages (travel), Services (IT), Schemes (banking). Columns are the tenant own; the bot reads every one.

Field	What to enter	Example / options
Item name *	Name of the product, service or package.	Web development / Kerala Honeymoon Package / Savings account
Group	Category the item belongs to (select or type a new one).	Vertical presets: Web development, Mobile apps, Cloud & DevOps, UI/UX, Consulting / Honeymoon, Family, Group, Adventure, Corporate / Accounts, Cards, Loans, Insurance, Deposits / Fashion, Electronics, Home, Beauty, Sports, Grocery
Short description	One-line description the bot reads out in listings.	React and Node.js build
Full description	Details shown when the customer asks more.	Multi-sentence text
Price	The vertical decides the label; blank if you do not sell at list price.	Price (retail) / Starting price (IT, real estate) / Package price (travel) / Interest or fee (banking) / Fee (finance) / Consultation fee (healthcare)
Short label	Compact button label used in menus.	Web dev
Link	Purchase or details URL.	https://...
Visible to the bot	Switch: hidden items stay out of answers.	on / off
Extra columns	Per-vertical detail fields, stored as attributes.	See the table below

Vertical	Extra columns to provide per item	Examples
E-commerce & retail	SKU; In stock; Warranty	TG-1042; 42 units; 12 months
Software & IT	Tech stack; Typical timeline; Engagement model	React, Node.js, AWS; 8-10 weeks; Fixed price
Tours & travel	Duration; Destinations; Includes	5 nights / 6 days; Kerala, Munnar; Hotel, transfers, guide
Banking & insurance	Eligibility; Charges	Salaried, 21-60 years; Zero annual fee
Finance & accounting	Next deadline; Documents needed	ITR due 31 July; PAN, ITR, bank statement
Healthcare & clinics	Timings; Department head	Mon-Sat, 9:00-18:00; Dr. ...
Real estate & property	Configuration; Carpet area; Location; Possession date	2 BHK; 1,250 sq.ft.; Prime Avenue, City Center; Ready to Move
Generic	Availability; Lead time	In stock / On request; 2-3 working days

A5 - WhatsApp menu data

Field	What to enter	Example / options
Menu header	Top line of the WhatsApp menu.	Leeway Softech
Menu body	Greeting paragraph under the header.	What would you like to do today?
Menu footer	Small line at the bottom.	Reply with a number or tap a button
Button text	Main CTA when the menu has one call-to-action.	Talk to us

Per menu option	What to enter	Example / options
Id	Unique identifier for the option.	menu_quote
Title	Customer-facing label.	Get a Quote
Section	Which list section it sits under (or create a new section).	Services / Support / Talk To Us
Icon	Emoji shown before the title.	tools, phone, star
Description	Sub-line in list menus.	Send us your requirements
Requires feature	Hides the option when that capability is off.	quote, callback, handoff...
Starts flow	Conversation flow the option launches.	flow_name
Routes to intent	Intent triggered instead of a flow.	intent_name
Answer text	Direct answer when neither flow nor intent applies.	We reply within one working day.
Keywords	Free-typed phrases that also trigger this option.	pricing, estimate, quote
Show only out of hours	Option appears only while closed.	on / off

A6 - Intent data (what the bot recognises)

Field	What to enter	Example / options
Name	snake_case intent id.	services_info
Answer	The reply the bot sends when the intent matches.	We build web and mobile apps...
Keywords	Tags the classifier matches on.	services, work, build, develop
Examples	Sample customer phrases for the matcher.	what do you do, what services do you offer
Requires feature	Hides the intent when a feature is off.	callback, quote...
Flow	Conversation flow launched instead of a plain answer.	flow_name
Enabled	Switch. Disabled intents stay in draft, invisible live.	on / off

Intent changes go to draft and need publishing -- a customer never sees them until the profile version is published.

A7 - Knowledge uploads (documents the bot learns from)

Field	What to enter	Example / options
Module	What the file is for.	FAQ / Knowledge base / Brochure / New releases
File	One file per upload; extracted, embedded and made searchable for this tenant only.	PDF, DOC, DOCX, TXT, XLS, XLSX, MD, CSV
Size limit	Per file.	20 MB
Search	Console filter for uploaded files.	by file name

Provide current, approved documents: FAQ sheets, policy documents, product manuals, brochures, price lists. Confirm every document is cleared for automated customer support use.

A8 - Team accounts data

Field	What to enter	Example / options
Full name	Person behind the account.	Priya Sharma
Username *	Login name, lowercase.	priya
Password *	Minimum 6 characters. Always via the secure handoff, never in this document.	managed by onboarding team
Email	For alerts and audit.	priya@company.com
Phone	For urgent escalations.	+91 98xxxxxx10
Role	super_admin (everything) / admin / sub_admin (restricted by permissions).	sub_admin
Tenant scope	Bind the account to one brand, or leave empty for platform-wide.	leeway-softech
Permissions	Tick the rights this person needs (list below).	subset of 29 permissions

Permission group	Permissions
Tenant configuration	Manage operations (profiles, menus, tenants)
Team	Manage admins
Content	Upload FAQ files; Upload KB files; View uploaded files; Delete uploaded files
Products & brochure	View products; Add / Edit / Remove catalogue entries; Manage brochure and new releases
Conversations	Use admin chat; View chat history; Live inbox
Operations	View orders; Edit/delete orders; View complaints; Handle complaints; View customers
Growth	Campaigns; Edit/delete campaigns; View analytics
Distributors (B2B)	Distributors; Add/edit/delete distributors
IT vertical pages	Add/edit/delete services; Edit the projects, technologies, careers and benefits pages

A9 - Integration credentials (API access page)

Collect the provider choice and environment first; keys and secrets go through the secure handoff only, never in this document.

Provider	Fields to provide	Example
Environment (all providers)	Test / sandbox or production / live.	Test
Stripe	Secret key; Publishable key; Webhook secret	sk_test_51Mz...; pk_test_51Mz...; whsec_...
Razorpay	Key ID; Key Secret; Webhook secret (optional)	rzp_test_1DP5mmOlF5G5ag; ...; ...
Custom payment gateway	Custom API endpoint URL; Authorization header / bearer token; Webhook signing secret	https://api.mygateway.com/v1/checkout; Bearer your_secret_token; ...
Blue Dart	Customer code; License key; Login ID	123456; ...; BD_USER
Xpressbees	Account email; Password; or API token (bearer)	merchant@example.com; password; Bearer token
Custom carrier	Endpoint URL; Authorization header; Webhook signing secret	https://api.carrier.com; Bearer ...; ...
Integration request	Integration category; Provider; Purpose (business justification)	Payments - Stripe - collect order payments in WhatsApp
Payment test data	A test Order ID and Amount (INR)	ORD-1001; 1499
Delivery test data	Origin pincode and destination pincode for a live booking test.	380015; 110001

A10 - Campaigns data (optional module)

Field	What to enter	Example / options
Template name *	snake_case template id.	diwali_restock_offer
Category *	WhatsApp template category.	Marketing / Utility / Authentication
Language	One locale per template (Meta requirement).	en, hi, gu
Header (optional)	Short title line.	Diwali Restock Offer
Footer (optional)	Closing line.	Reply STOP to unsubscribe
Sample values	Example values for the variables, for template approval.	Rajesh, 20%
Template body *	The message with {{variables}}.	Hi {{name}}, get {{discount}} off on your Diwali restock.
Segment name *	Name of the audience segment.	High-Value Customers
Audience type *	Who the segment selects.	Customers / Distributors
Segment filters	State / region; city; tier(s); product interests; sales volume >= (Rs.); or hand-picked selection by search (name, number, city).	Gujarat; Ahmedabad; Tier 1+2; chikki; Rs.50,000

A11 - Distributor data (optional B2B module)

Field	What to enter	Example / options
WhatsApp ID	Distributor WhatsApp account id.	012345678901234
Name *	Distributor or firm name.	Patel Traders

Phone	Contact number.	+91 98xxxxxx10
Email	Contact email.	sales@pateltraders.com
Region *	State or region they cover.	Gujarat
City	City.	Ahmedabad
Tier	Pricing tier.	Tier 1 / Tier 2 / Tier 3
Product interests	What they stock.	chikki, snacks
Address	Business address.	street, city, pincode
Service area	Pincodes or areas served.	380001-380060
Sales volume	Monthly or yearly volume.	Rs.2,00,000 / month
Outstanding payments	Any pending dues.	Rs.15,000
Notes	Free text.	Prefers evening delivery

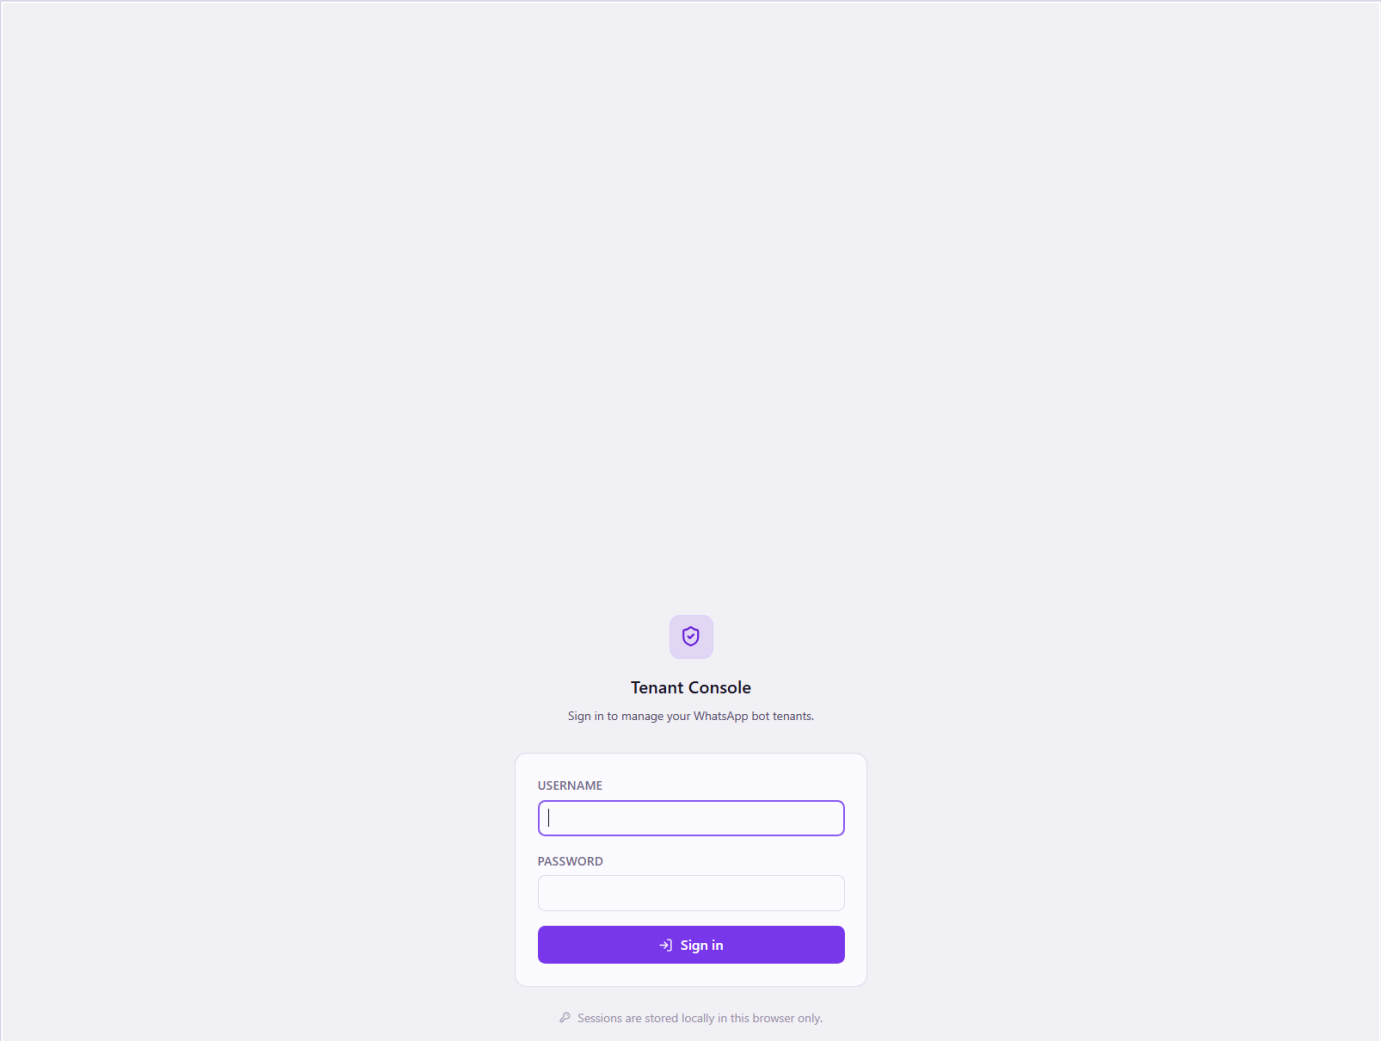

1 - Sign in

The entry point to the admin panel.

Every console feature sits behind this sign-in; sessions are stored locally in the browser. Accounts come from the onboarding team on the Team page.

Data on this page

Client provides the team member list (A8: names, usernames, emails, roles). Passwords are created through the secure handoff only.

Page 1. Admin panel sign-in for the Tenant Console.

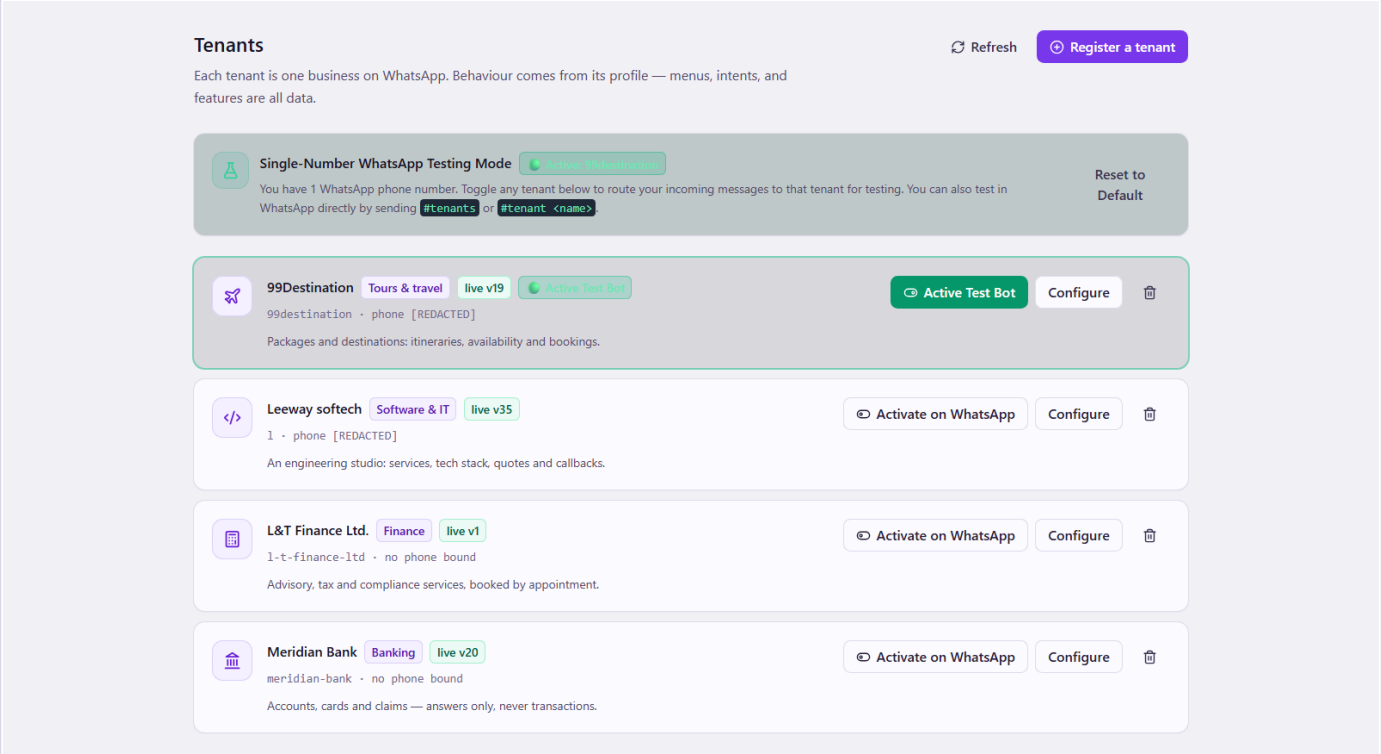

2 - Tenants

All chatbot brands configured on the platform.

The tenant list is the platform home: one row per client brand with vertical and status. Selecting a tenant opens its console.

Data on this page

Tenant id, company name, display name and vertical (A1 step 1) decide the row. The industry vertical sets the vocabulary and default questions.

Page 2. Tenant list: every brand the platform serves, with vertical and status.

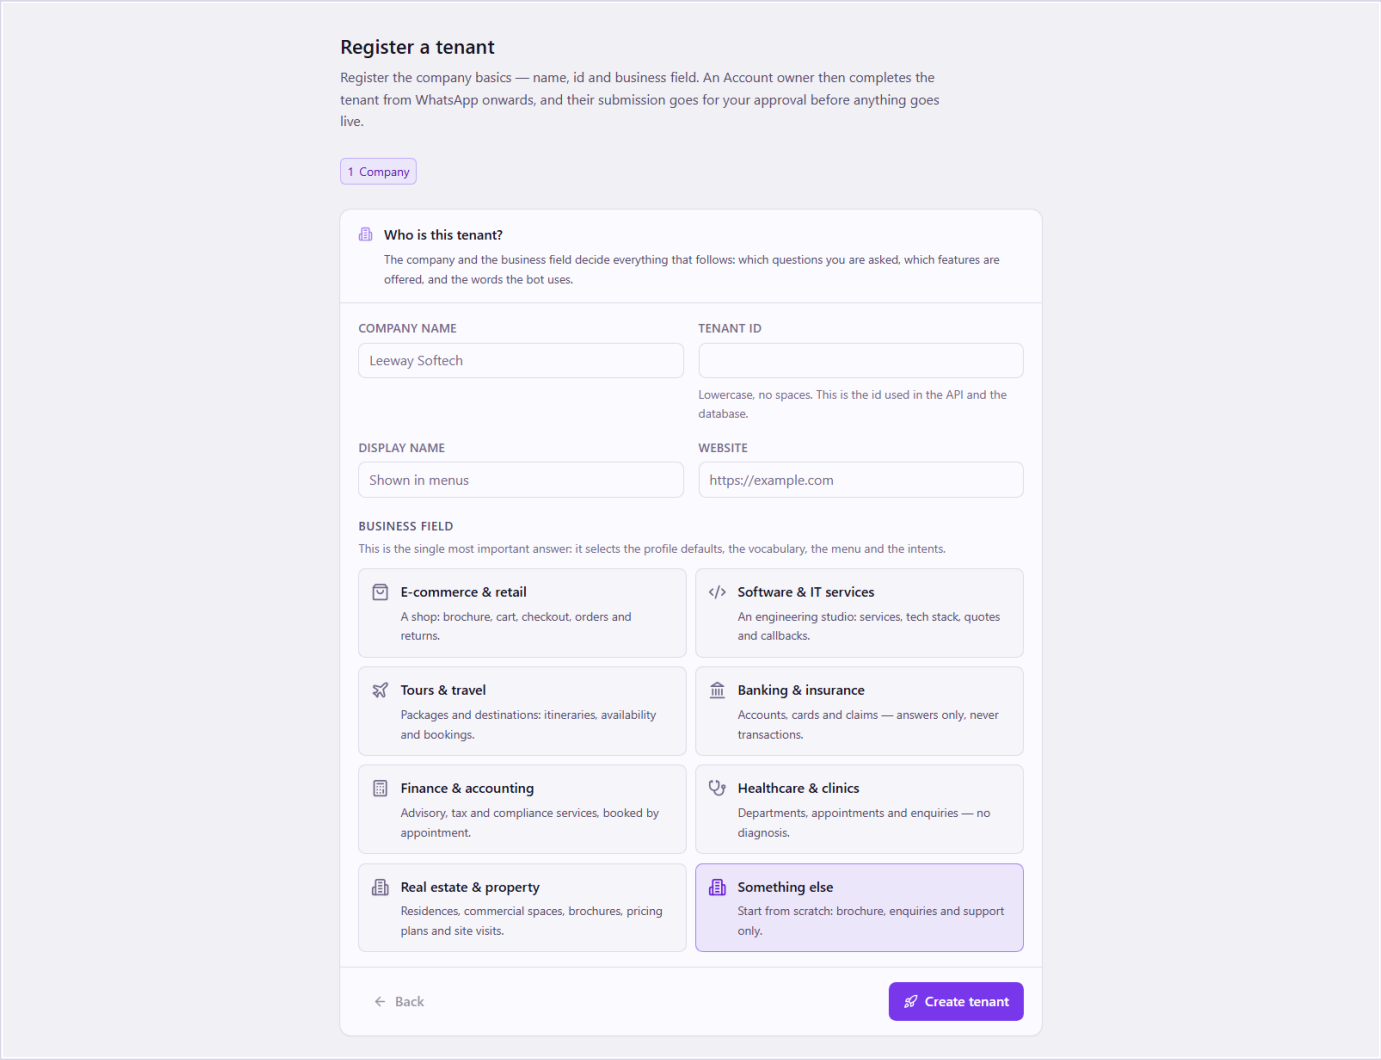

3 - Register a tenant

The guided questionnaire that collects the client basics.

The register wizard is the intake form: seven steps from company basics to review. Every field is listed in A1; the business questions in A2 and module switches in A3.

Data on this page

All of A1 (7 steps), A2 business answers and A3 module switches. Super admins publish directly; sub admins submit for approval.

Page 3. Register wizard - the intake questionnaire, seven steps from company basics to review.

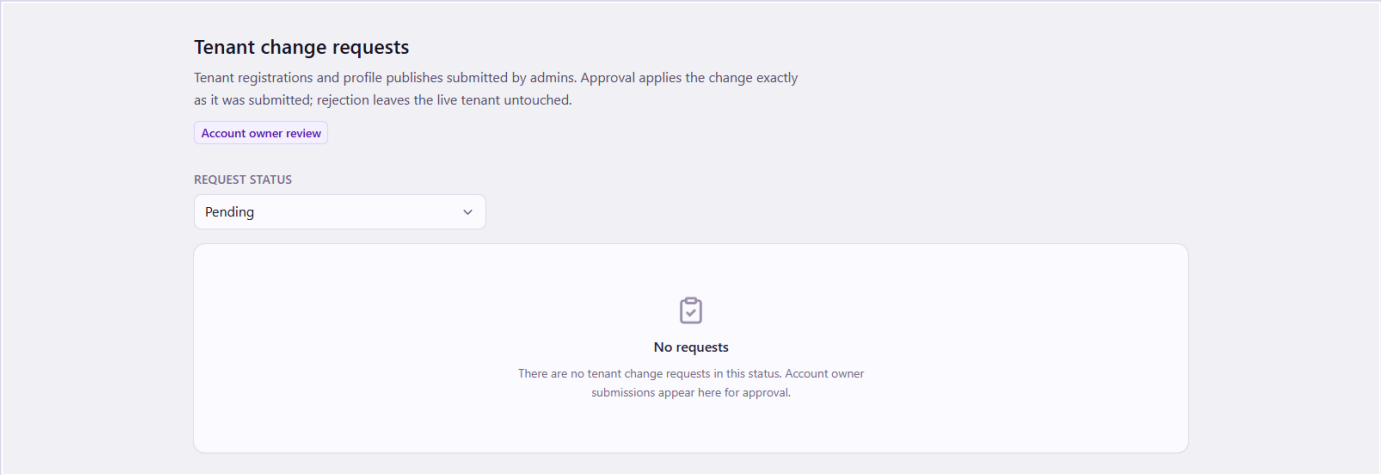

4 - Tenant change requests

The approval queue for registrations and profile publishes.

Registrations and profile changes submitted by admins wait here; approving applies the change exactly as reviewed. Nothing reaches the live bot without this step.

Data on this page

The client names the approval owner (who signs off profile changes) and agrees the review turnaround.

Page 4. Tenant change requests - submissions waiting for approval before they go live.

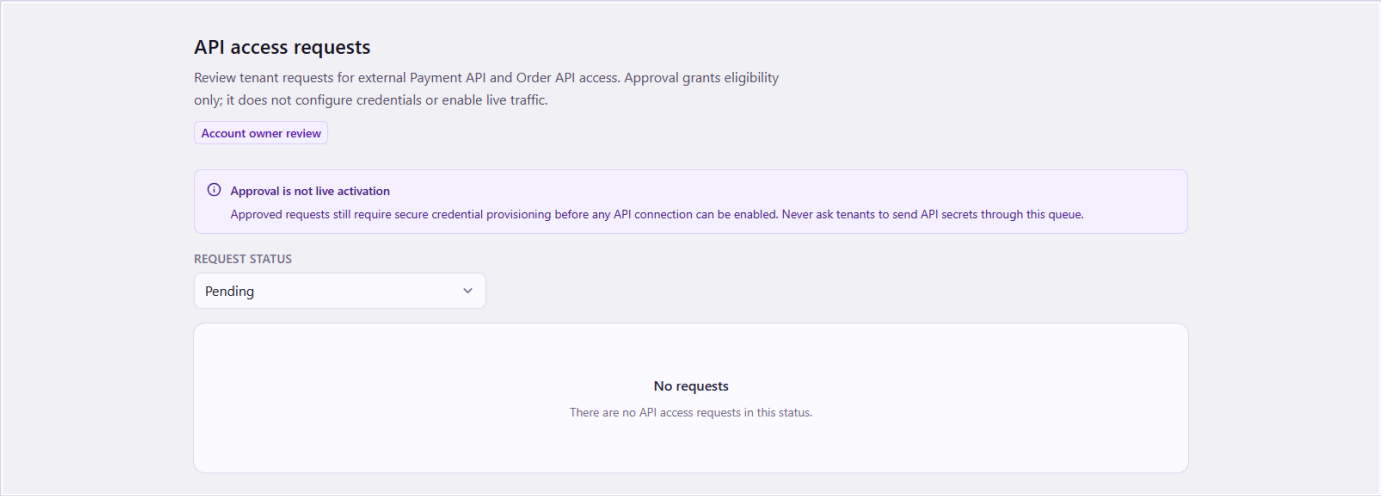

5 - API access requests

Approval of external Payment API and Order API access.

A tenant requests eligibility for payment and order integrations; approving grants the eligibility the API Access page needs for live keys.

Data on this page

A9 first block: which integrations, environment (test or live) and the business justification recorded with the request.

Page 5. API access requests - grant eligibility for payments and order APIs.

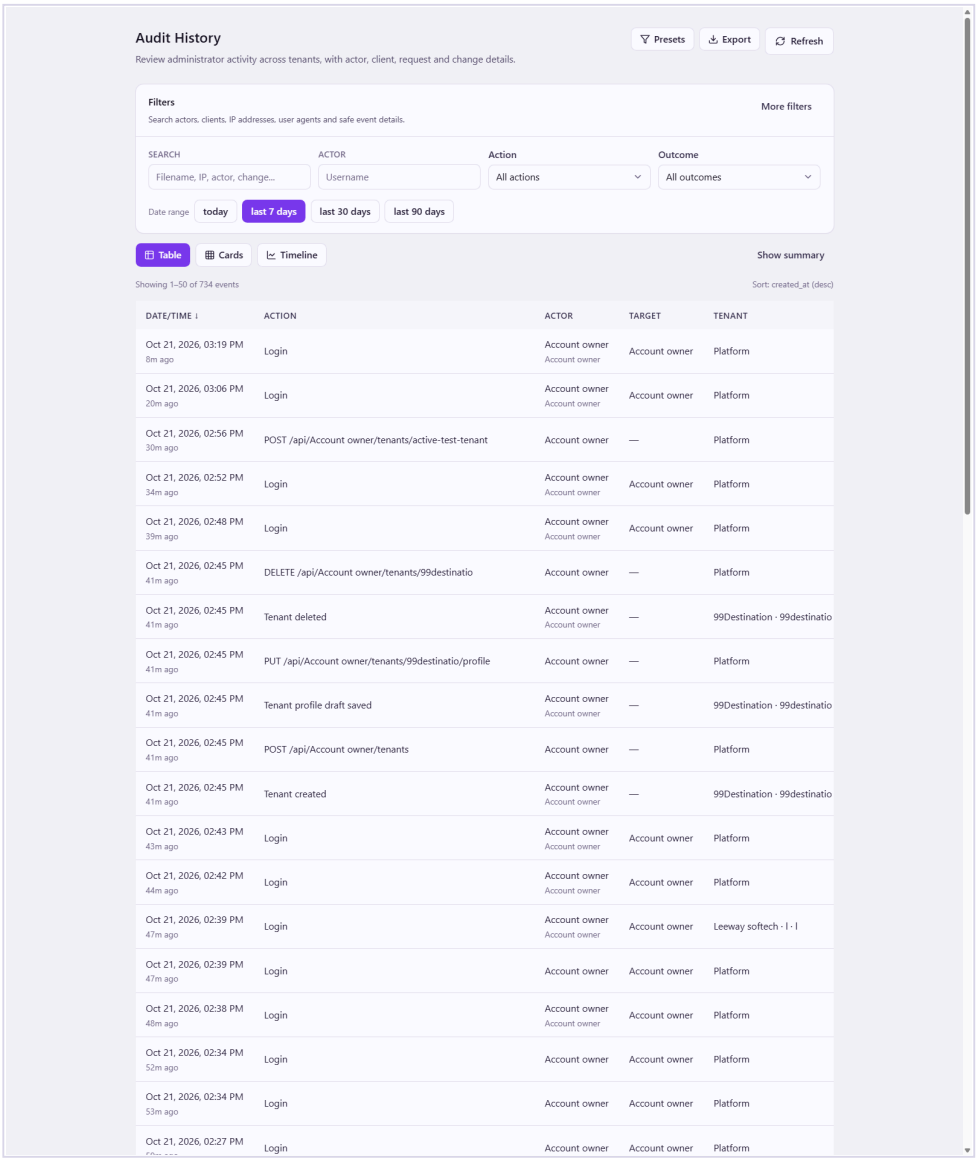

6 - Audit history

Every administrator action, across tenants.

Actor, client, request and change details for each console action, with presets and filters. The evidence trail for go-live reviews.

Data on this page

The client nominates who may review audit history; the sign-off record is kept against this log.

Page 6. Audit history - the change log behind every configuration move.

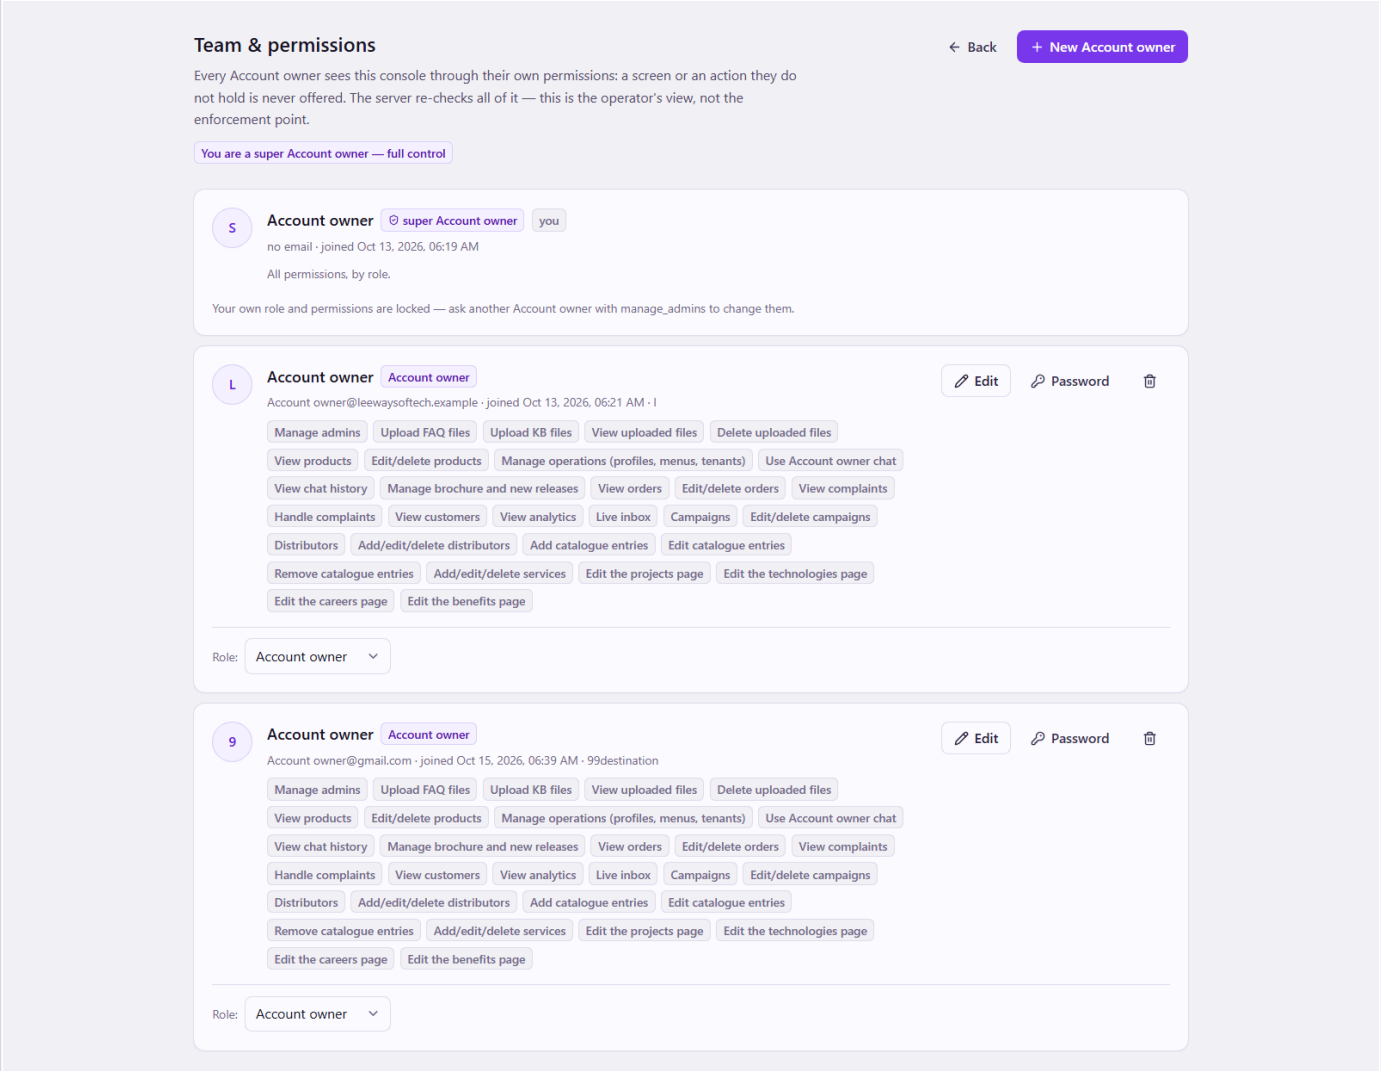

7 - Team & permissions

Console accounts and what each person can do.

Every admin sees the console through their own permissions: a screen or an action they do not hold is hidden.

Data on this page

All of A8: full name, username, email, phone, role, tenant scope and the exact permission tick-list per account.

Page 7. Team & permissions - accounts, roles and the rights each one carries.

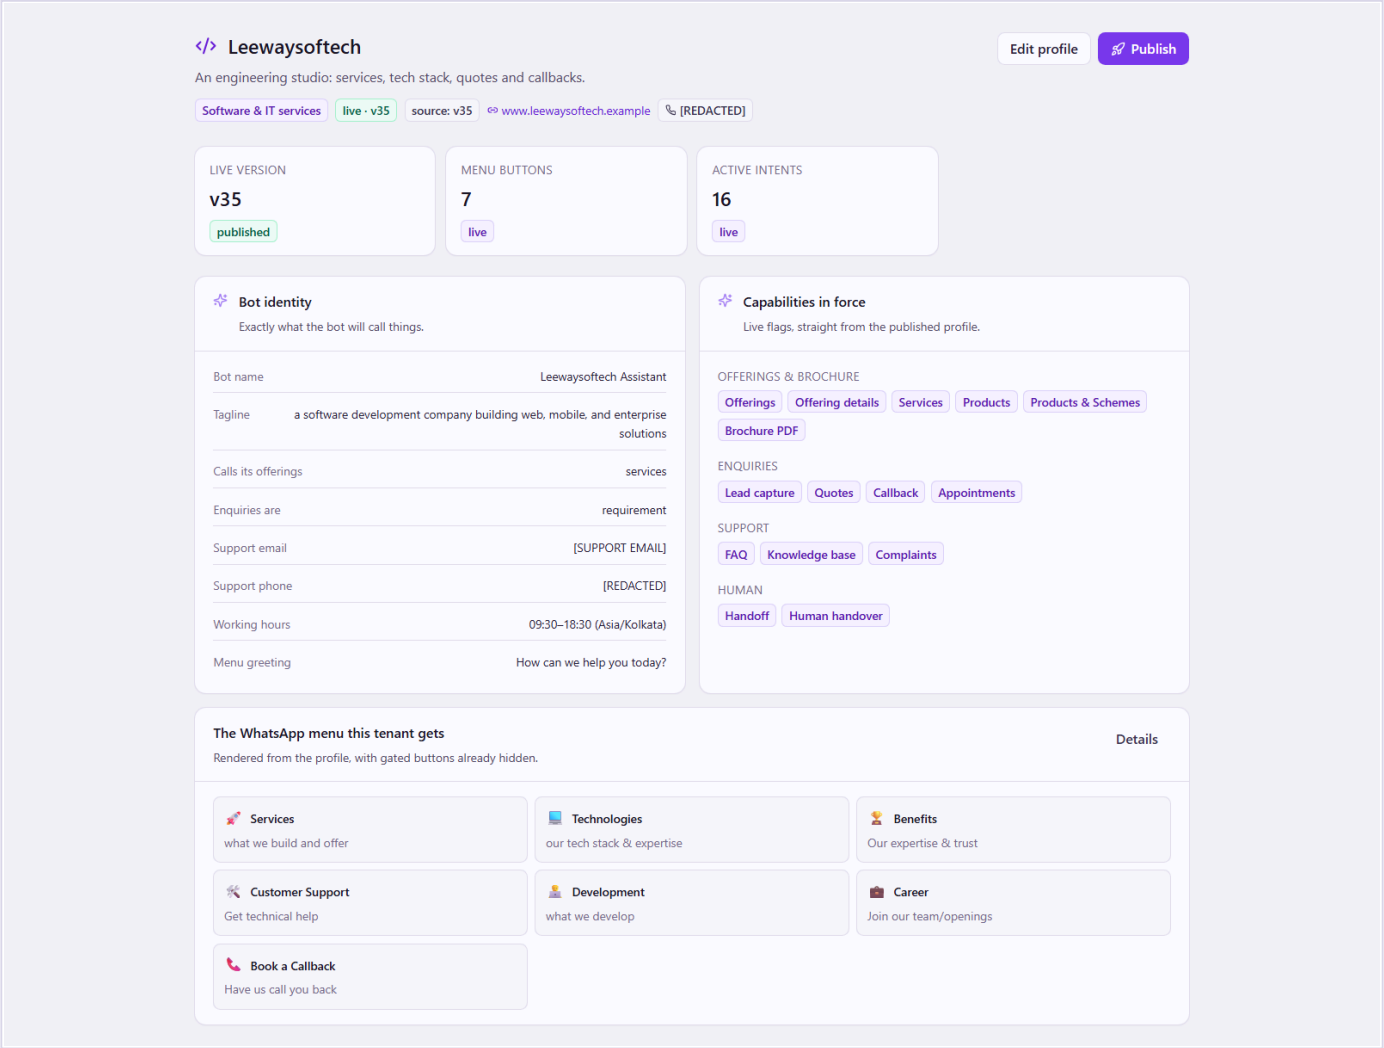

8 - Overview

The status board for one chatbot.

Identity, live version, capability groups, WhatsApp menu and active intents at a glance. Shared at every status call.

Data on this page

No new data - it reports what was loaded from A1-A7. Confirm the shown identity, capabilities and menu match the agreed scope.

Page 8. Overview - profile status, capabilities and menu of one tenant.

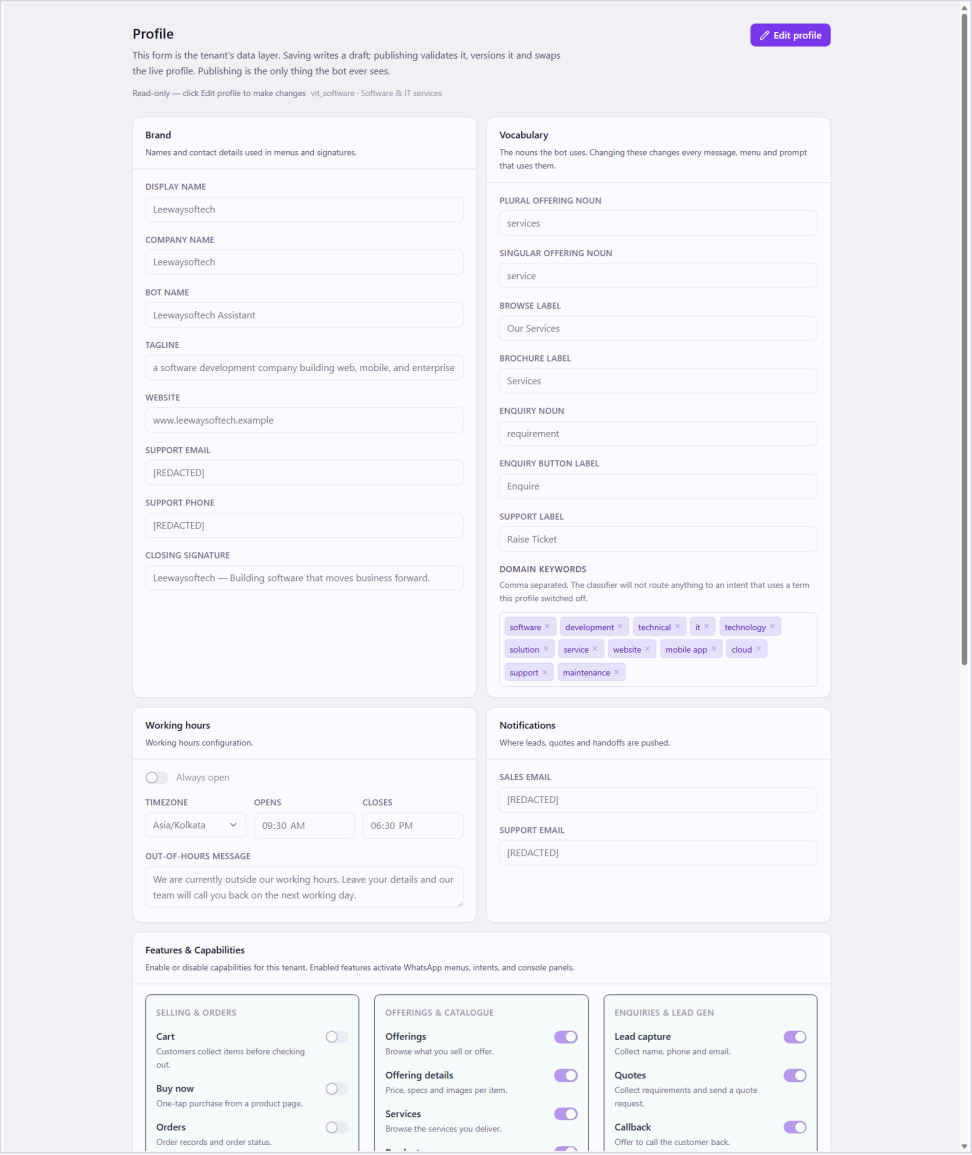

9 - Profile

The data layer the bot answers from.

Saving writes a draft; publishing validates, versions and swaps the live profile. Brand, hours, contacts, vocabulary, notifications and guardrails all live here.

Data on this page

A1 steps 2-3 and 5-6 (re-editable here): brand fields, working hours, notifications, vocabulary nouns and domain keywords, guardrails, and the A3 feature switches.

Page 9. Profile editor - brand, hours, contacts, vocabulary, notifications and guardrails; drafts publish only after review.

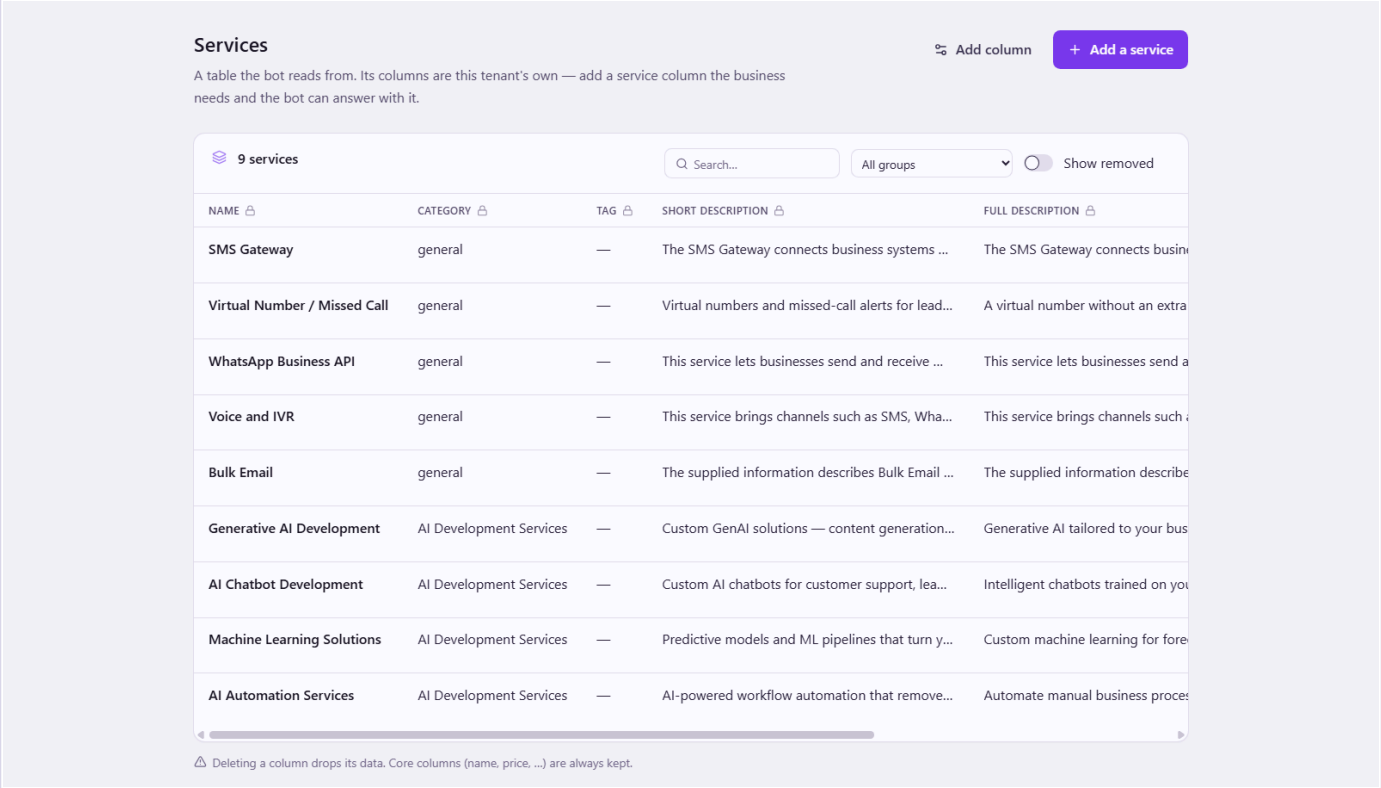

10 - Catalog (Services / Packages / Products)

The table the bot reads.

One row per item you sell. Columns are the tenant own: add any column the business needs and the bot can use it.

Data on this page

All of A4: item rows with name, group, descriptions, price, link, visibility and the vertical extra columns (SKU, stock, tech stack, duration, eligibility...).

Page 10. Records panel - the offering table with tenant-defined columns.

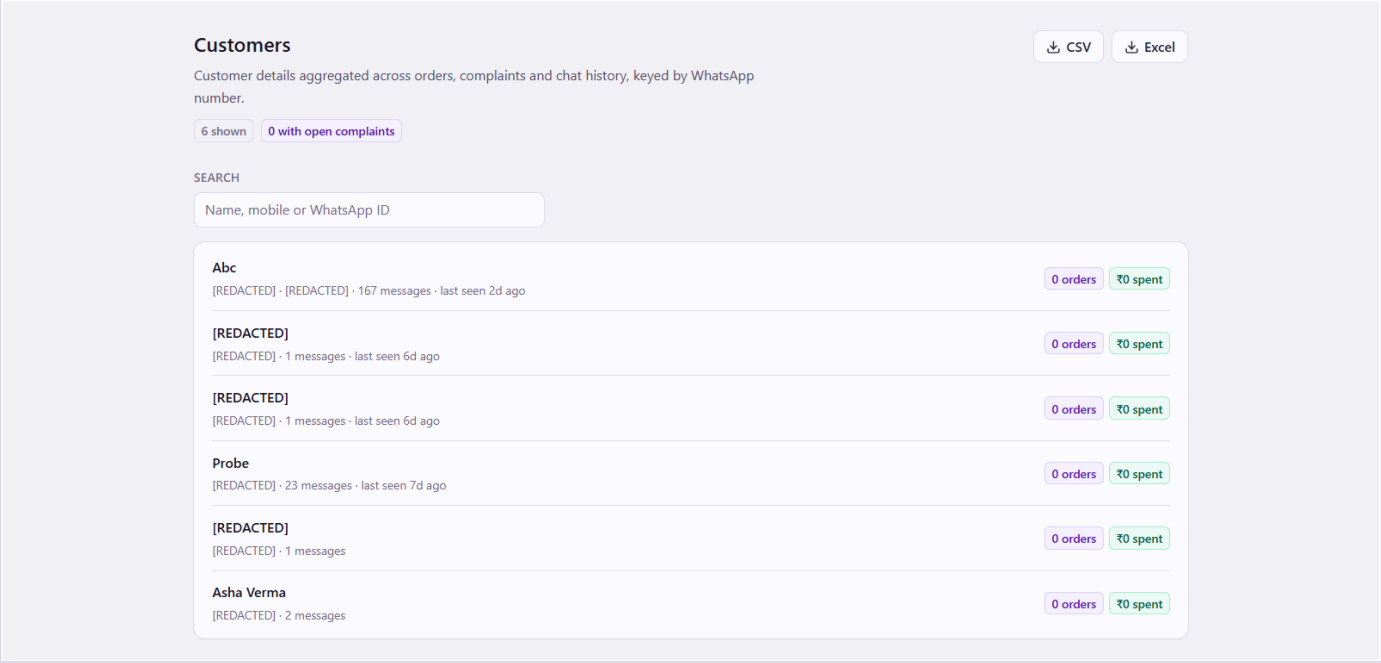

11 - Customers

Everyone who has talked to the bot.

Customer details aggregated across orders, complaints and chat history, keyed by WhatsApp number. It fills itself as the bot runs.

Data on this page

No client input. Confirm storing customer chat data in the platform is approved, and who may view customer records.

Page 11. Customers - aggregated profiles keyed by WhatsApp number.

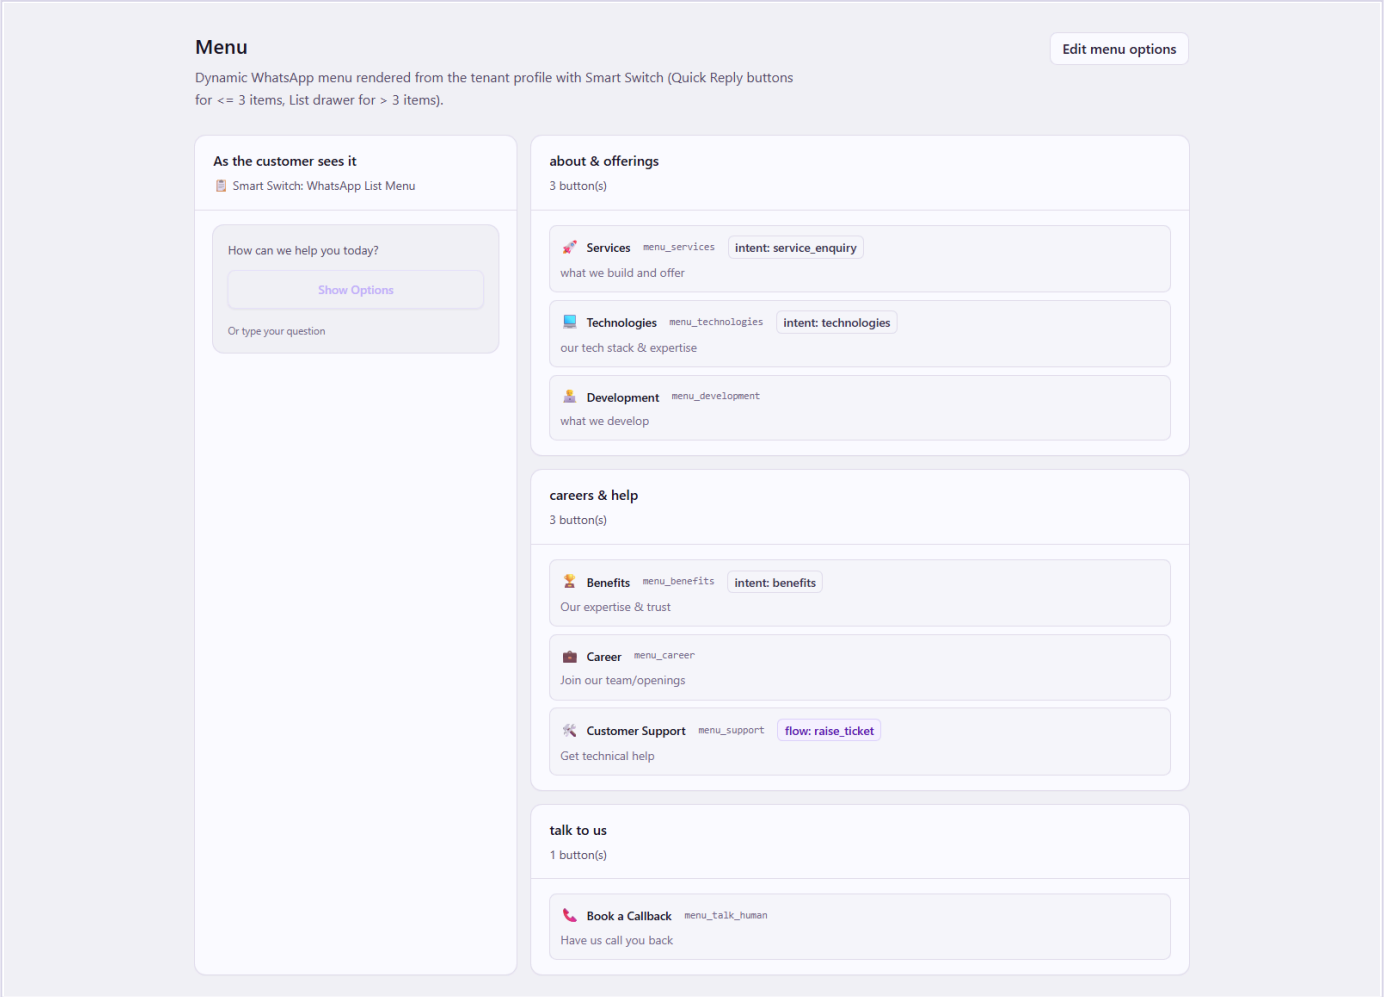

12 - Menu

The WhatsApp menu as customers see it.

Rendered live from the tenant profile with smart switch: quick-reply buttons for three options or fewer, a list menu for more.

Data on this page

A5 first table: header, body, footer and button text - confirm the final wording here before publishing.

Page 12. Menu preview - the exact WhatsApp menu the bot will present.

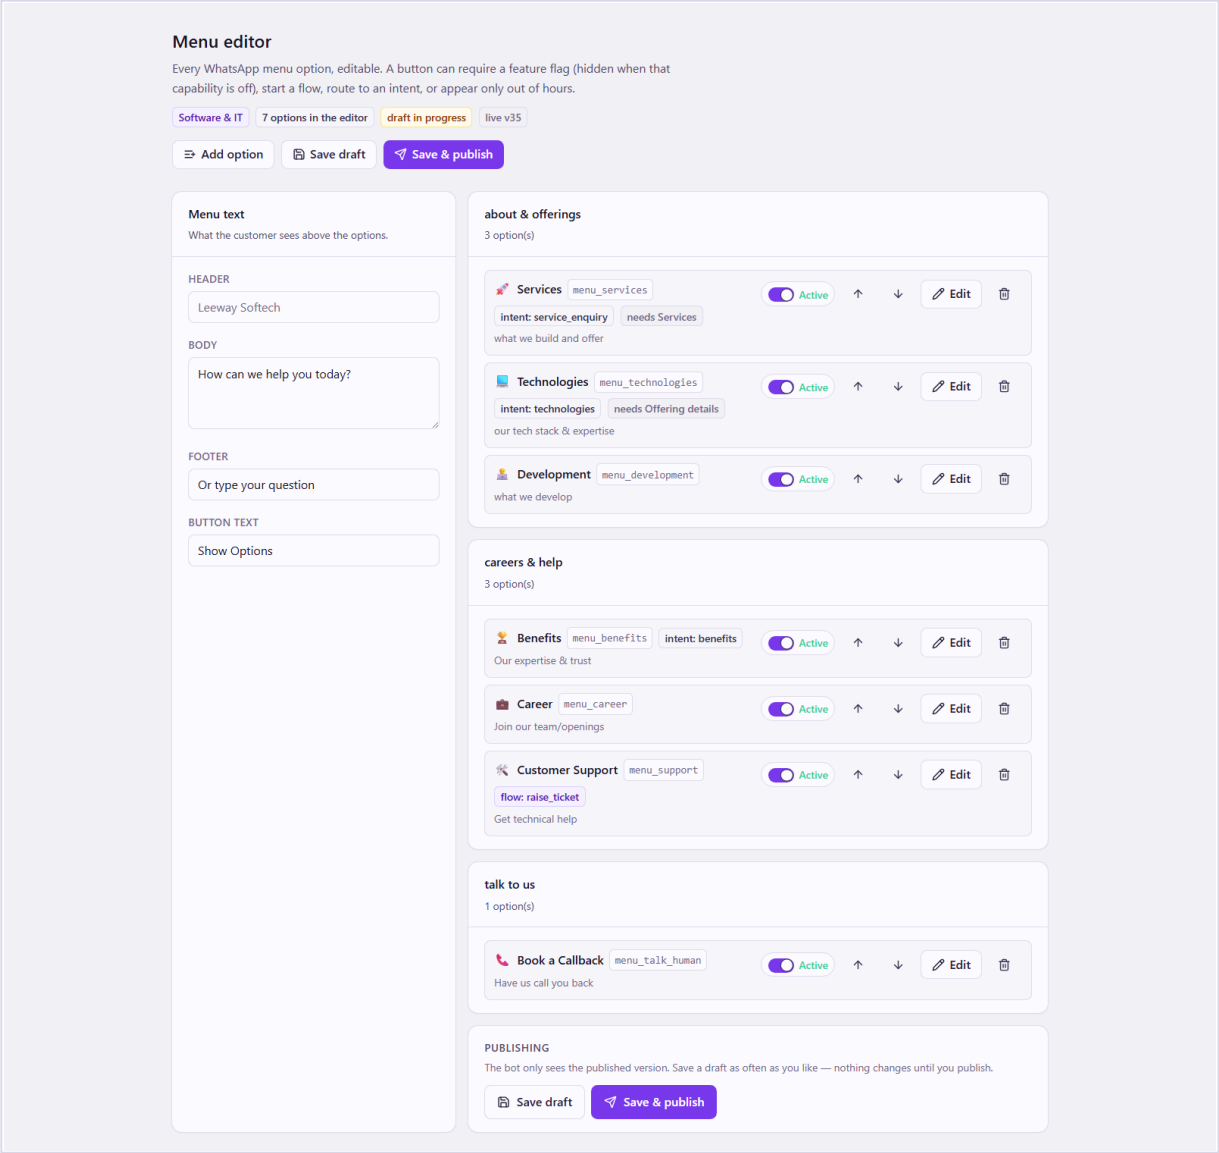

13 - Menu editor

Every menu option, editable.

Each WhatsApp menu option can be renamed, reordered, gated behind a feature flag or pointed at a flow, an intent or a direct answer.

Data on this page

A5 second table, one entry per menu option: id, title, section, icon, description, feature gate, flow / intent / answer text, keywords, out-of-hours only.

Page 13. Menu editor - per-option wording, order and feature gates.

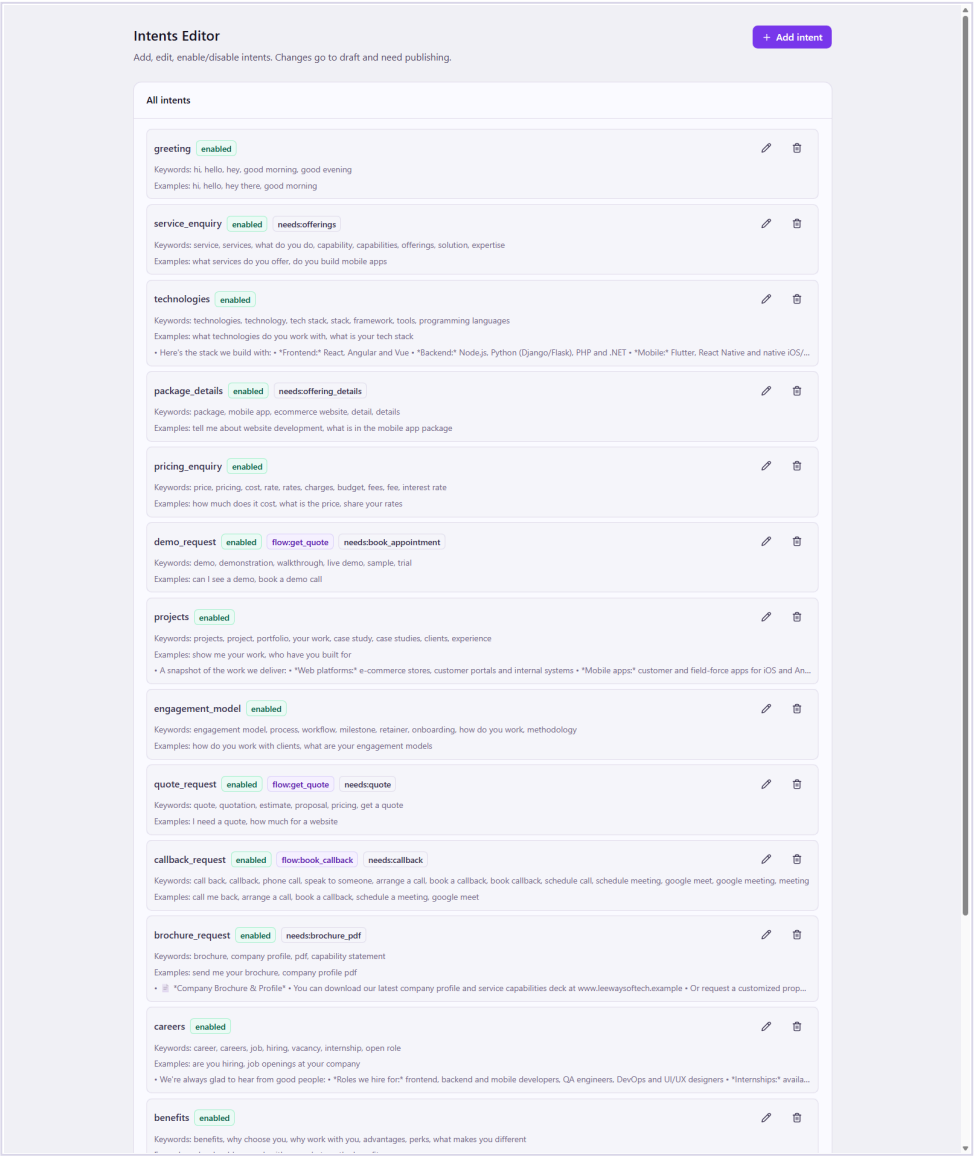

14 - Intents editor

What the bot recognises and where it routes.

Add, edit, enable and disable intents - the customer phrases mapped to answers, flows and actions.

Data on this page

All of A6: one intent per topic with name, answer, keywords, example phrases, feature gate, flow and enabled switch.

Page 14. Intents editor - phrases in, routing out; draft until published.

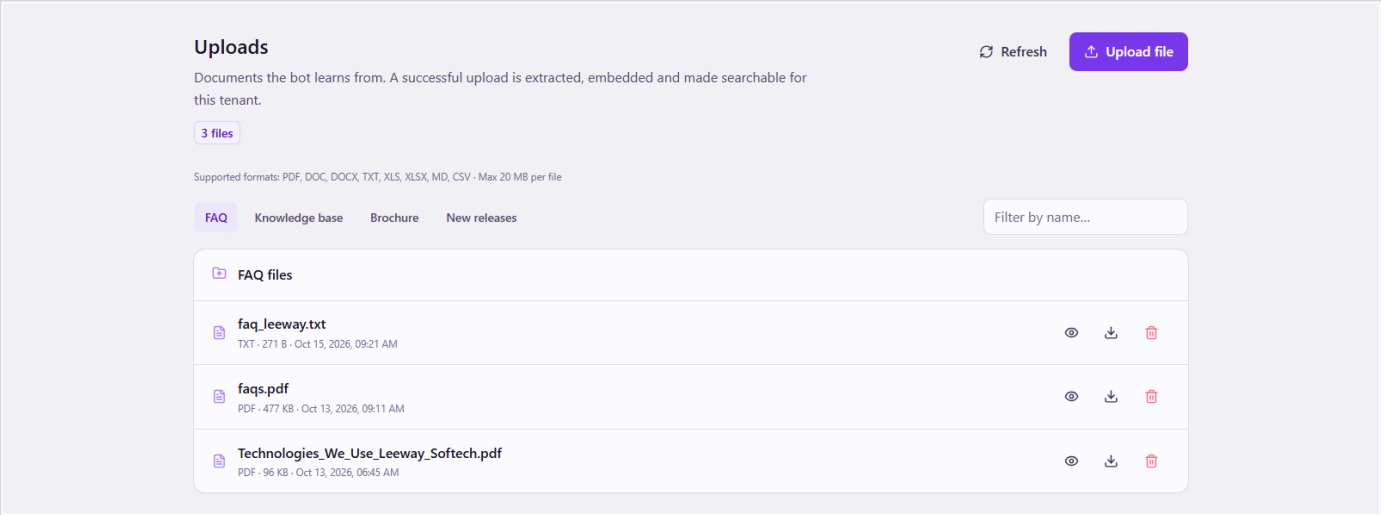

15 - Uploads

Documents the bot learns from.

A successful upload is extracted, embedded and made searchable for this tenant only. FAQs, brochures, policies and manuals become bot knowledge here.

Data on this page

All of A7: files up to 20 MB each (PDF, DOC, DOCX, TXT, XLS, XLSX, MD, CSV) tagged to the right module: FAQ, Knowledge base, Brochure or New releases.

Page 15. Uploads - each file is extracted, embedded and searchable per tenant.

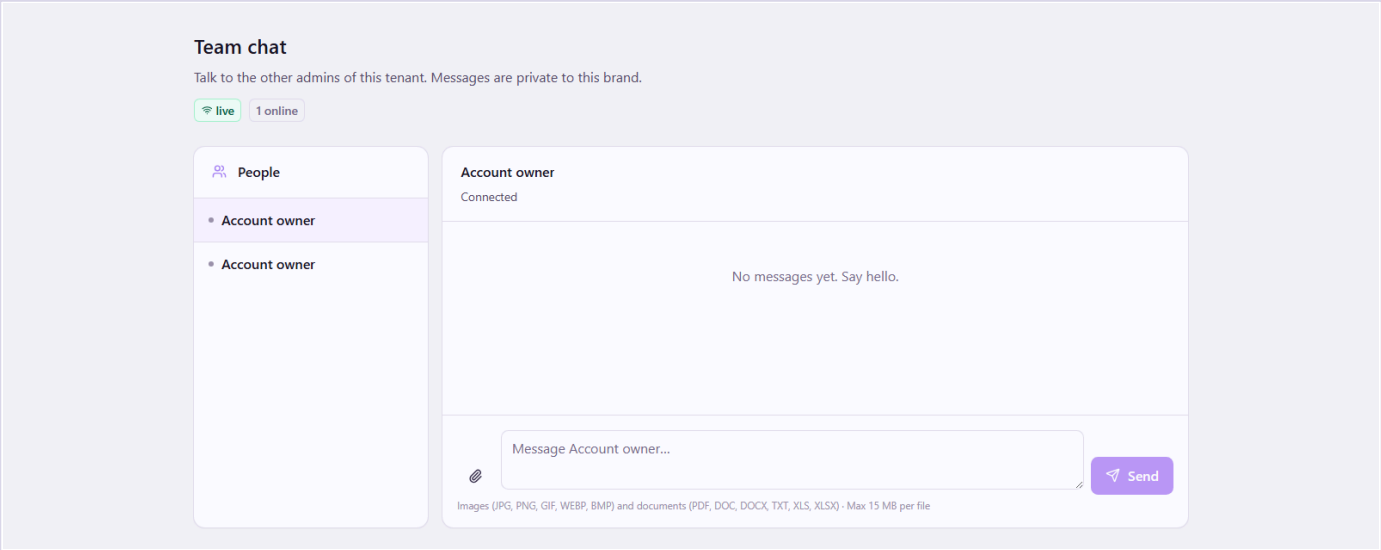

16 - Admin chat

The internal team channel.

Private per-brand chat between the tenant admins - coordination for the team, not customer conversations.

Data on this page

A8 team list: which members take part in the internal chat.

Page 16. Team chat - internal coordination, private to the brand.

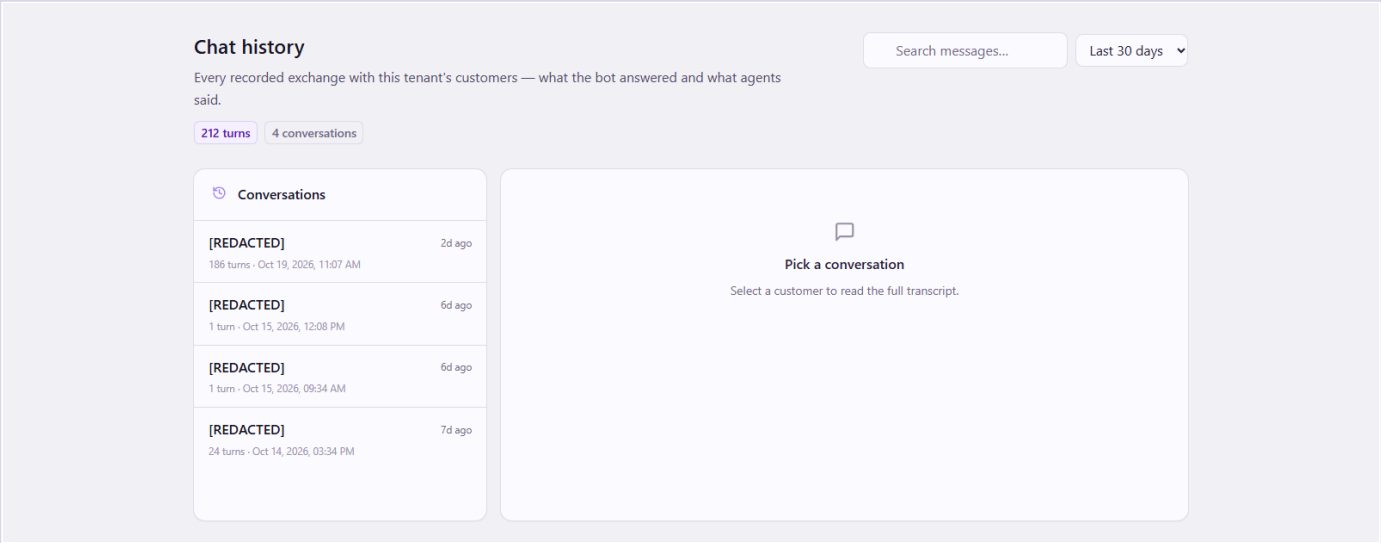

17 - Chat history

Every recorded customer exchange.

What the bot answered and what agents said, filterable by customer - the evidence for acceptance testing.

Data on this page

The acceptance test questions and expected answers (verified here), plus retention expectations for transcripts.

Page 17. Chat history - the full transcript record per conversation.

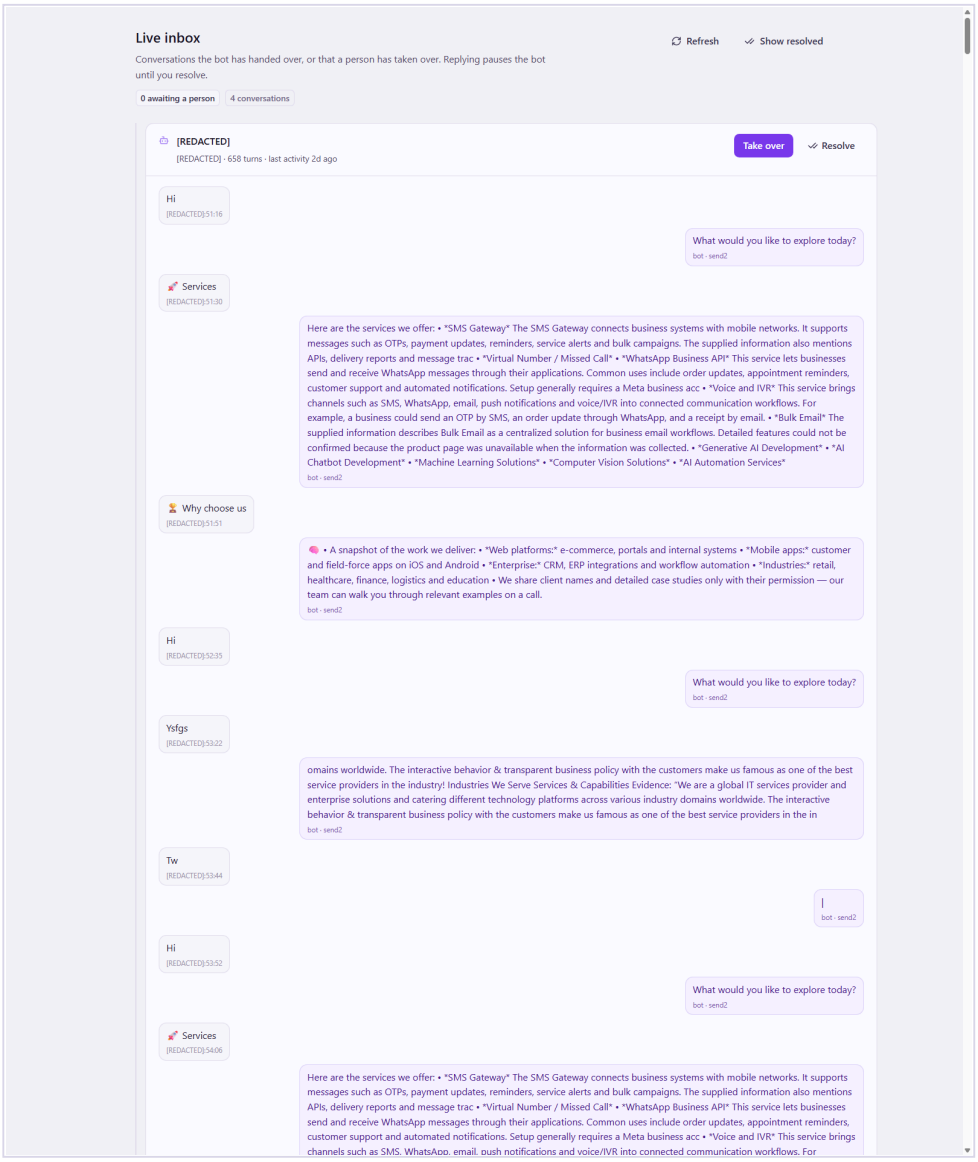

18 - Live inbox

Conversations handed over to a human.

Conversations the bot handed over or a person took over. Replying pauses the bot until released.

Data on this page

A1 step 6 guardrails: handoff keywords and escalation message; plus inbox owners, coverage hours and response-time expectation.

Page 18. Live inbox - handover conversations; replying pauses the bot.

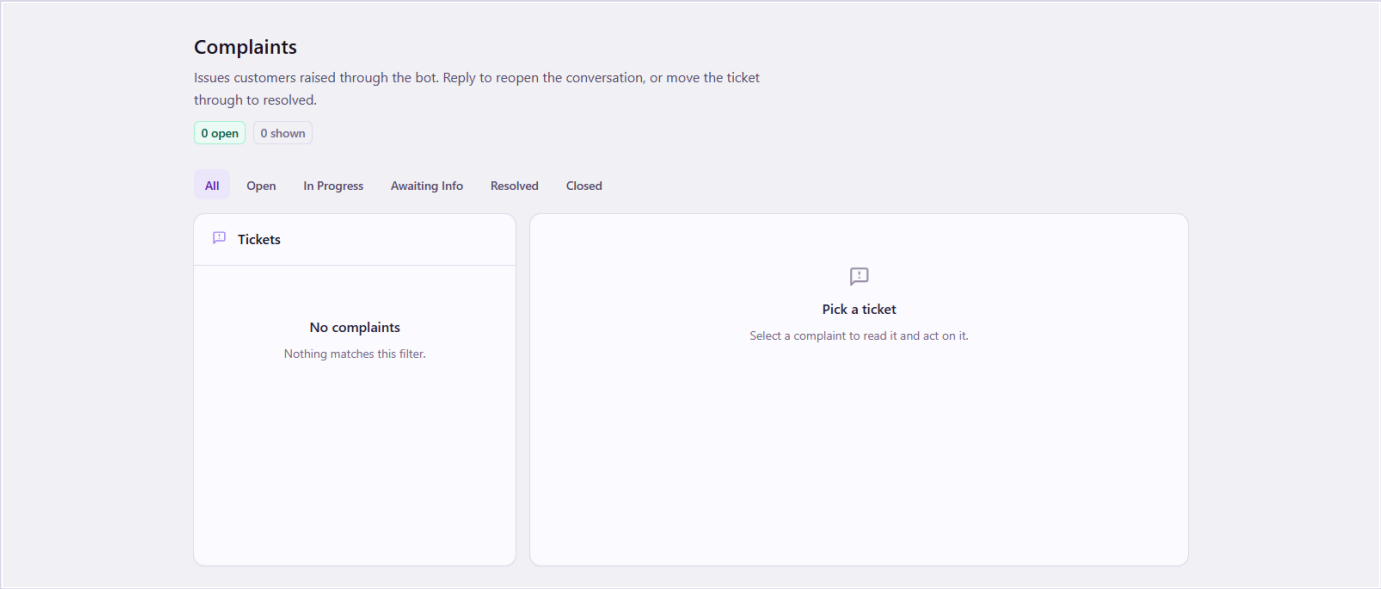

19 - Complaints

Tickets customers raise through the bot.

Issues raised via the bot, with status workflow: reply to reopen the conversation or move the ticket to resolution.

Data on this page

Complaint owners, status flow (open, in progress, resolved) and priority / auto-escalation rules.

Page 19. Complaints - ticket queue with status workflow.

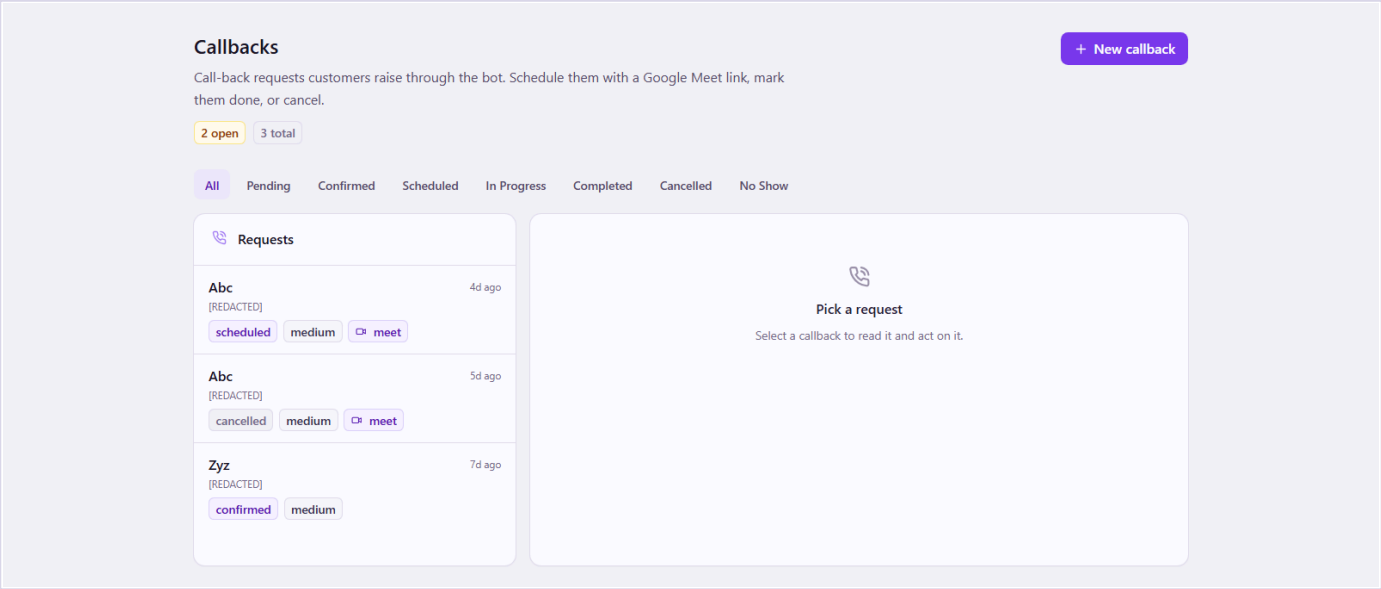

20 - Callbacks

Call-back requests booked from WhatsApp.

Requests customers raise through the bot. Schedule them with a Google Meet link, mark done, or cancel.

Data on this page

The Google account to connect for Meet links, callback team members and their availability windows.

Page 20. Callbacks - schedule with a Meet link, complete or cancel.

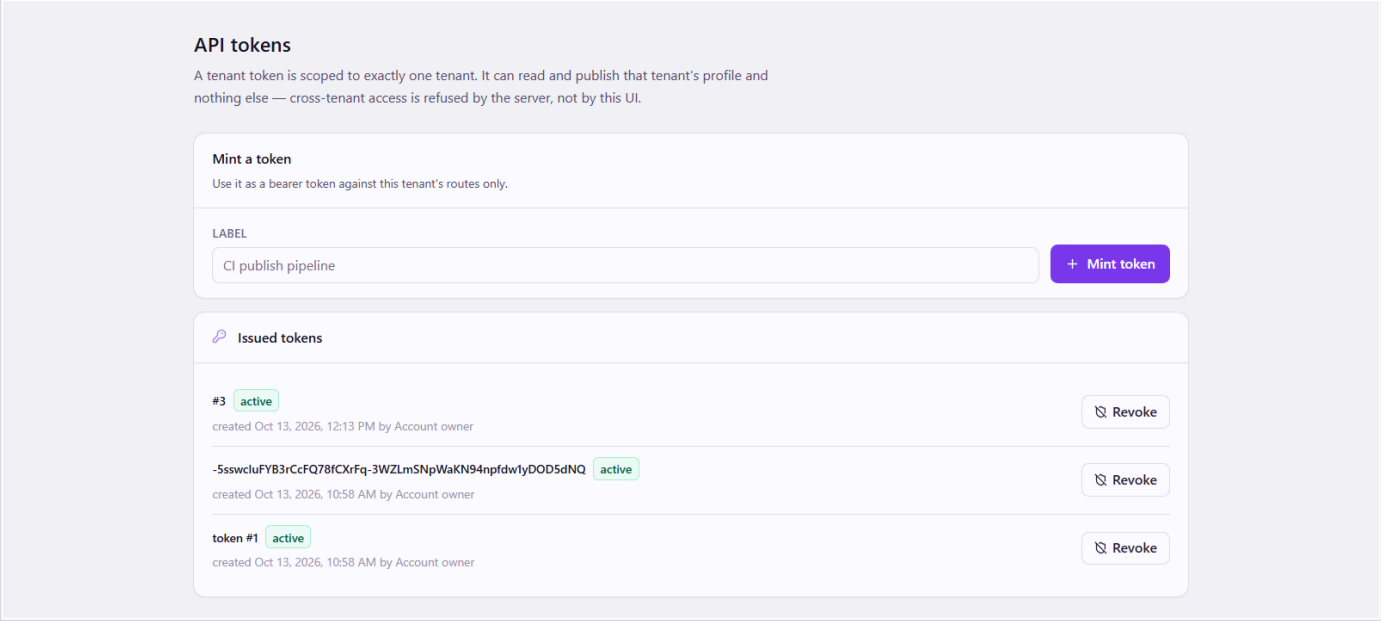

21 - API tokens

Tenant-scoped publish tokens.

A tenant token can read and publish exactly one tenant profile and nothing else - for clients whose own systems update the bot configuration programmatically.

Data on this page

Whether the client systems integrate via API token, the token owner, and how the token is stored client-side (secure handoff).

Page 21. API tokens - one token, one tenant, publish rights only.

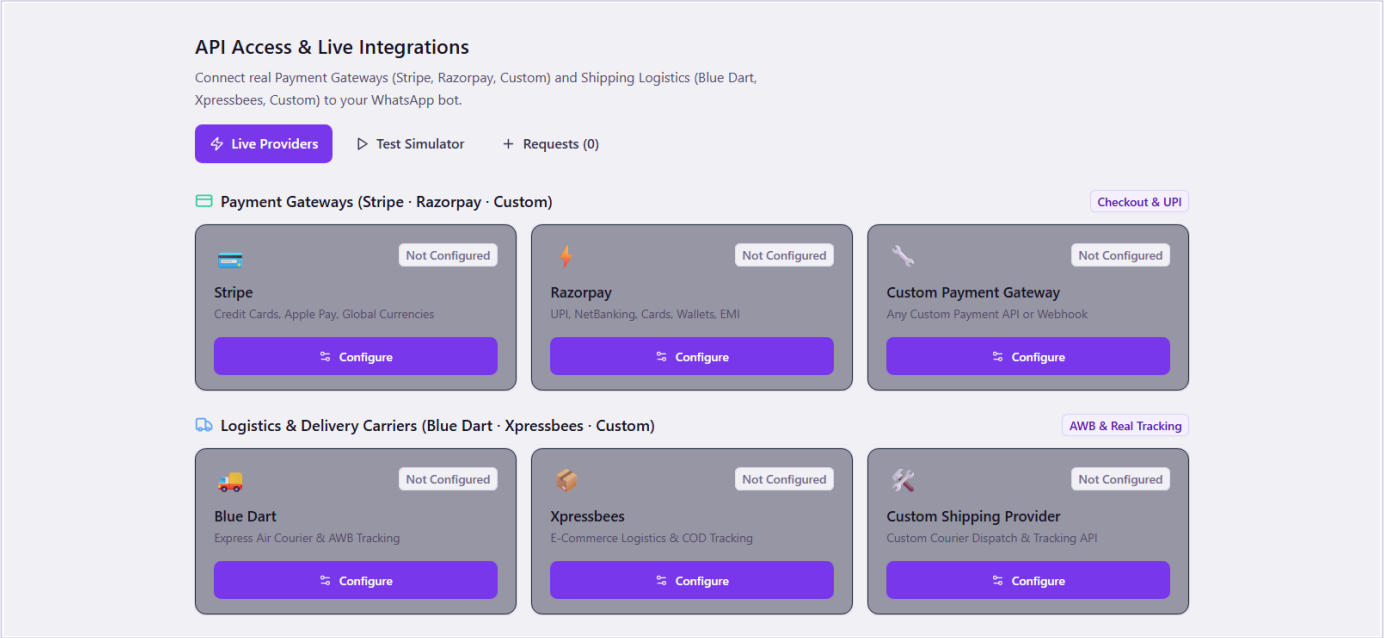

22 - API access & live integrations

Payments, logistics and custom APIs.

Connect real payment gateways and shipping carriers, test them with a live order, and manage order lookups.

Data on this page

All of A9: provider choice, environment, every key / secret field per provider (via secure handoff), test order data and test pincodes.

Page 22. API access - gateway and carrier credentials, tests and order lookups.

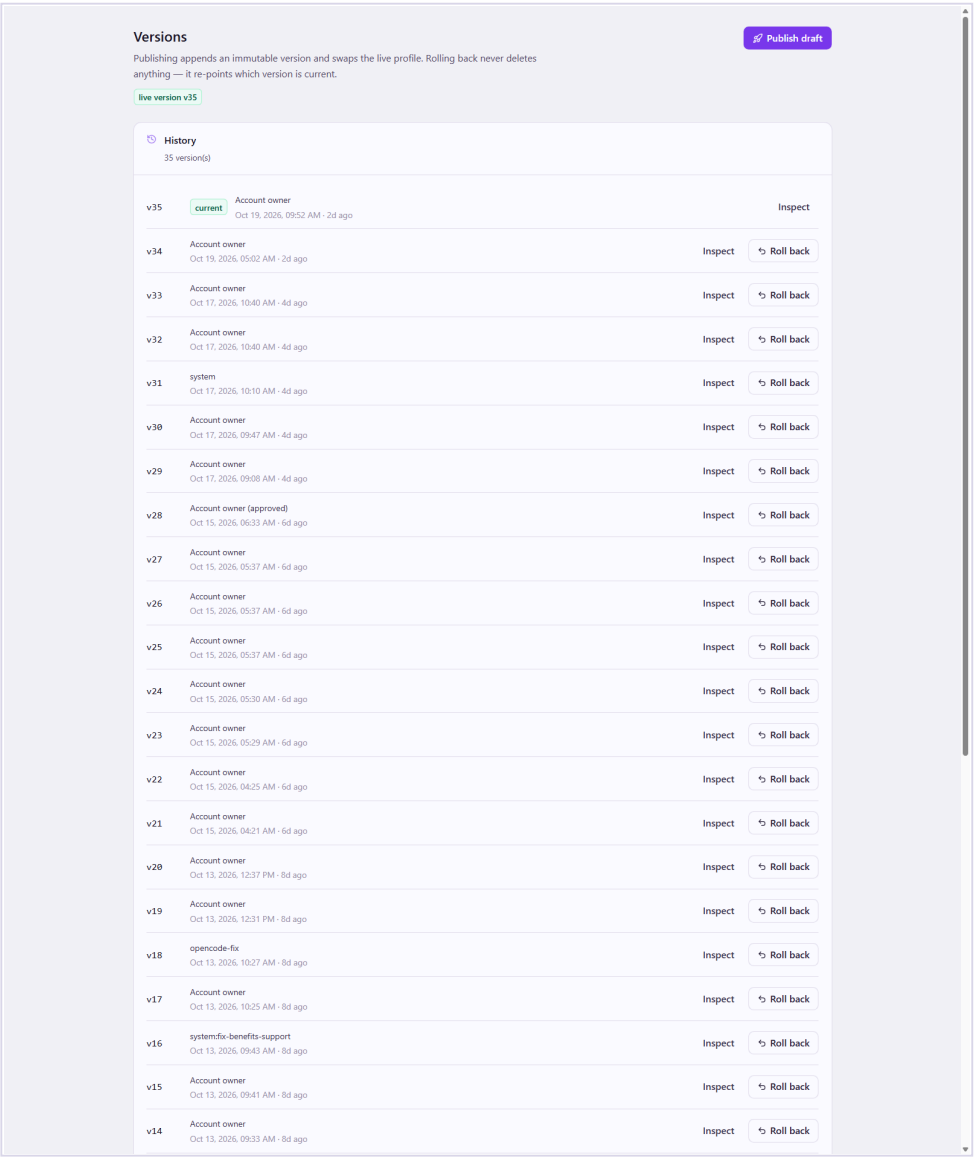

23 - Versions

Immutable publish history.

Publishing appends a version and swaps the live profile; rollback never deletes anything. This is the audit point for what exactly is live.

Data on this page

Which published version is the go-live version, and who may publish / roll back on the client side.

Page 23. Versions - publish history with instant rollback.

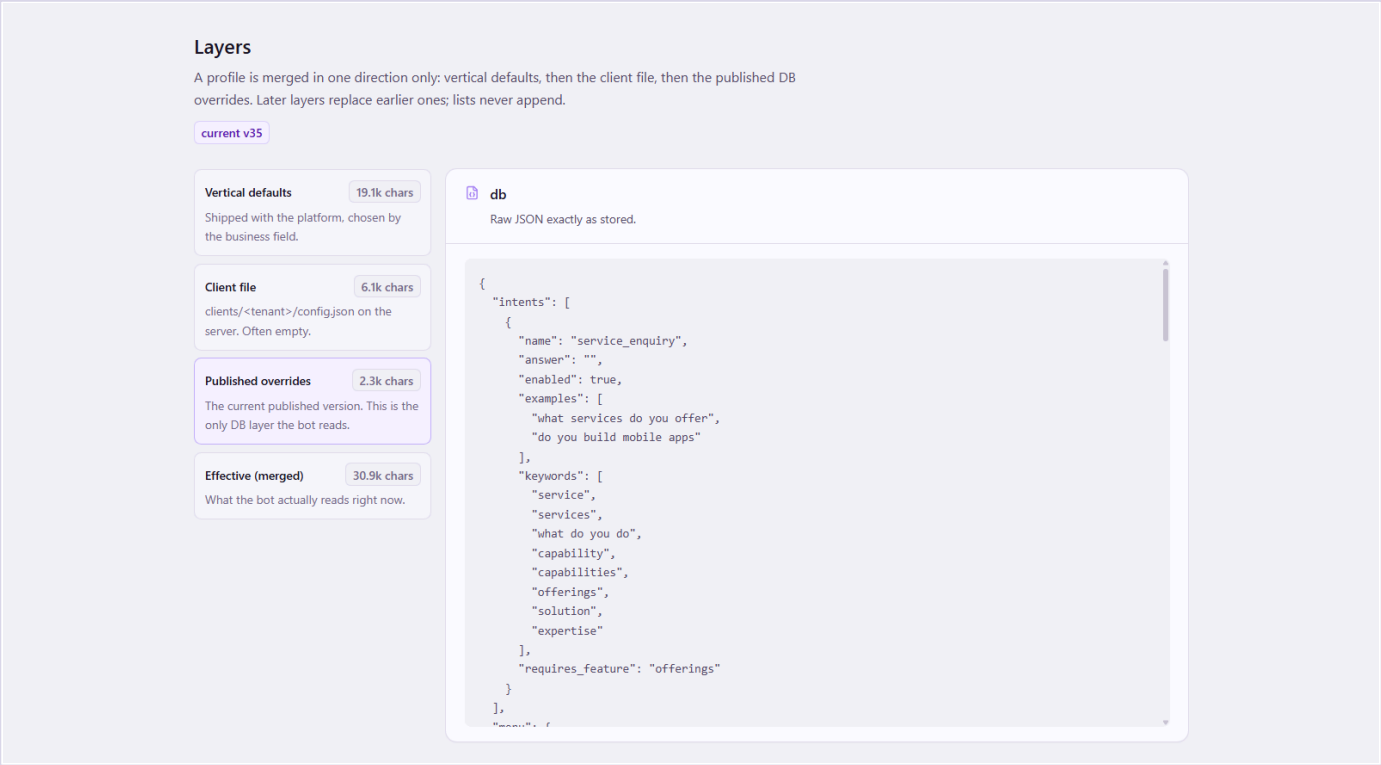

24 - Layers

How the final profile is assembled.

A profile merges in one direction only: vertical defaults, then the client file, then published database overrides.

Data on this page

Any vertical default the client wants overridden (vocabulary, menu wording, answers) - applied as a published override layer.

Page 24. Layers - vertical defaults, client file, published overrides.

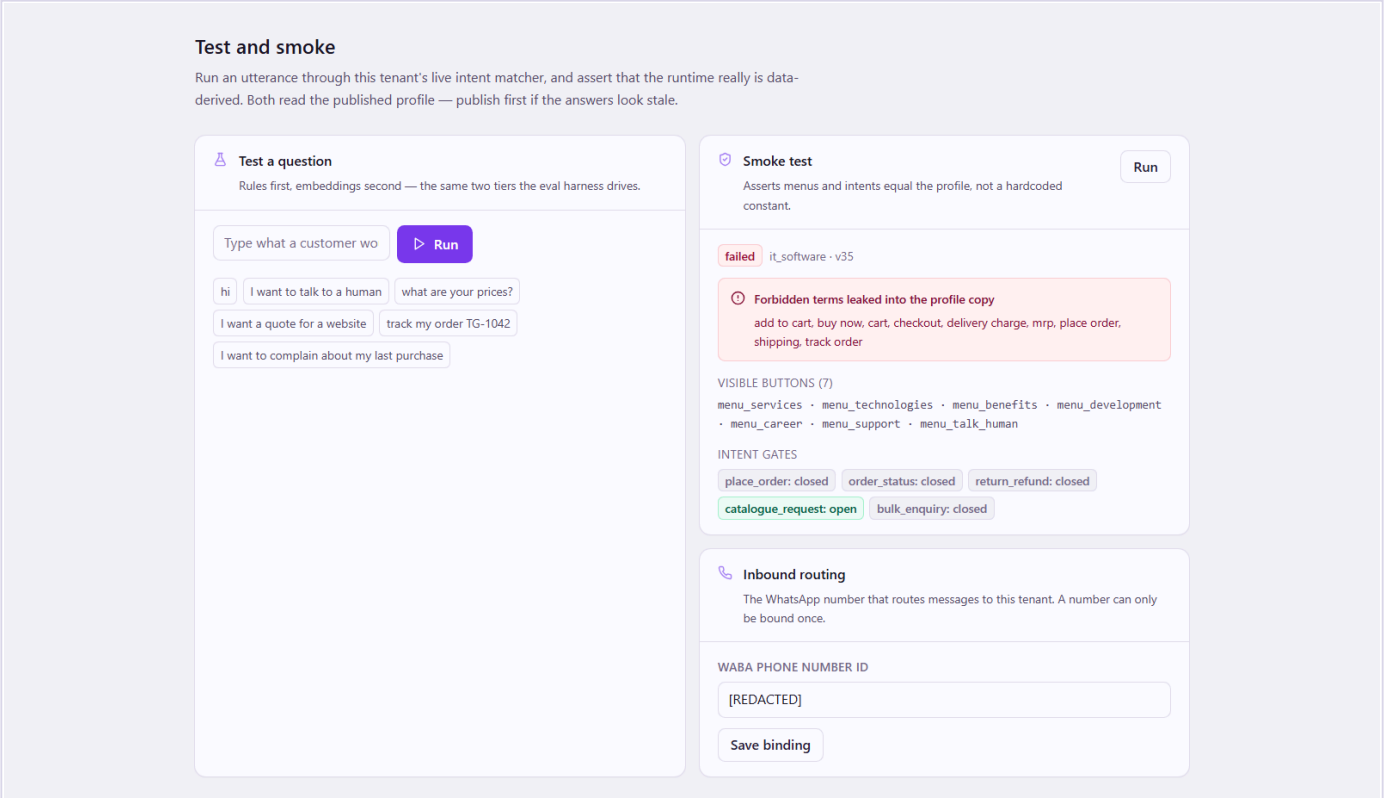

25 - Test and smoke

Prove the live bot before sign-off.

Run an utterance through the tenant live intent matcher and assert the runtime is data-driven; smoke checks flag issues like forbidden terms leaking into profile copy.

Data on this page

The client acceptance questions with expected routing, and sign-off that every smoke check passes on the go-live version.

Page 25. Test and smoke - utterance checks and the pre-launch smoke results.

Go-live checklist

Confirm every item with the onboarding owner before the bot receives real customers.

Ready to publish when

- [ ] Every A1-A7 field is provided and confirmed by the client.
- [ ] Catalogue rows, menu options and intents are loaded and reviewed.
- [ ] Knowledge documents are uploaded and answers spot-checked.
- [ ] Integrations (A9, if any) are connected, tested in the agreed environment and approved.
- [ ] Team accounts (A8) exist with the right roles; the approval owner is known.
- [ ] Guardrails are set: never-state list, forbidden terms, handoff keywords, escalation message.

Launch day

- [ ] Publish the final version (or approve the pending change request).
- [ ] Run the client's acceptance questions through Test and smoke; all checks green.
- [ ] Confirm the live version on Overview and the wording on Menu.
- [ ] Send a real WhatsApp message and verify routing, handoff and notifications.
- [ ] Confirm who monitors the inbox, complaints and callbacks from day one.

Reminder

A saved draft, a passing screenshot or a pending request is not a launch. The published version number on the Overview page plus a verified live test is the sign-off.
